Smile with Confidence

Benefits of Dentures:

- **Supportive** - Can make eating easier, make it easier to speak clearly & can improve the look of your smile
- **Cost Effective** - Cheaper than other options, such as implants, particularly if many teeth are involved
- **Comfortable** - Modern dentures are more comfortable & look more like natural teeth than those made with previous technologies

DTS Says:

"It might feel a bit odd wearing your dentures to begin with but you will soon get used to them"

Looking After Dentures

- You may decide to remove them at night to allow your gums to rest. If you do keep them moist, ideally in a denture cleaning solution
- Clean your dentures as often as you would your normal teeth (at least every morning and night)
- Brush your dentures with toothpaste before soaking to remove food particles
- Soak your denture in a fizzy solution of denture cleaning tablets to remove stains and bacteria
- Make sure you continue to see your dentist every six months for a check up
