

3shape TRIOS®

Digital Impression Scanning

DTS in conjunction with Core3dcentres® are an authorised distributor and trainer for 3Shape TRIOS®. The TRIOS® digital impression solution makes it easy for dentists to accurately capture and send the complete intraoral situation directly for expert design and manufacturing at the lab.

The TRIOS® makes it even easier for labs to work with digital impressions and design high quality restorations. The 3Shape TRIOS® digital impression taking system offers new technology which provides easy impression taking, better clinical results, increased patient satisfaction and rapid ROI.

The 3Shape TRIOS comes in two options, the TRIOS Colour and Standard, with the Colour showing the digital impression in full colour and the Standard version being in black and white. The TRIOS Colour comes in either a Cart or Pod Solution. The Standard is available in the Pod Solution only.

Indications:

- Anterior and posterior single crowns
- Inlays
- Onlays
- Veneers
- Bridges
- Implant Abutments
- Temporaries
- Digital Models for Orthodontics
- Post and Core Restorations

Advantages:

- Extreme Mobility - The light and handy Pod solution is easy to share among treatment rooms or different locations
- Live 3D visualisation - View the digital impression being built on your PC screen during scanning
- Single hand operation - The newly designed scanner mount enables dentists to pick up and park the scanner with one hand
- Modern easy-to-use touch screen - Smart-touch screen provides full control
- Unique motion sensor interface - Like a gaming-controller, use the hand-held to virtually rotate and turn the digital impression
- Flexible connectivity with Wi-Fi and Bluetooth
