Xltek	RV, DV, PAT, OLEV, RSEV, RSMNT	*.erd
Xltek EPWorks	RV, RSEV	*.iom

## EPILOG PREOP - EEG data requirements

- We accept EEG data with a **duration more than 12 hours** recorded in an epilepsy monitoring unit.
- The EEG data must be recorded in one **continuous recording session**. We do not accept multiple recordings of the same patient in one submission.
- We accept EEG recordings in a **standard clinical setup** (according to the **international 10-10 or 10-20** positioning system).
- The **number of electrodes should be higher or equal than 17**.
- Please provide us the raw EEG data files. If you have multiple files from the same recording, please put the files in a folder first and upload them in a zipped folder.
