

## Retagging using a Psion

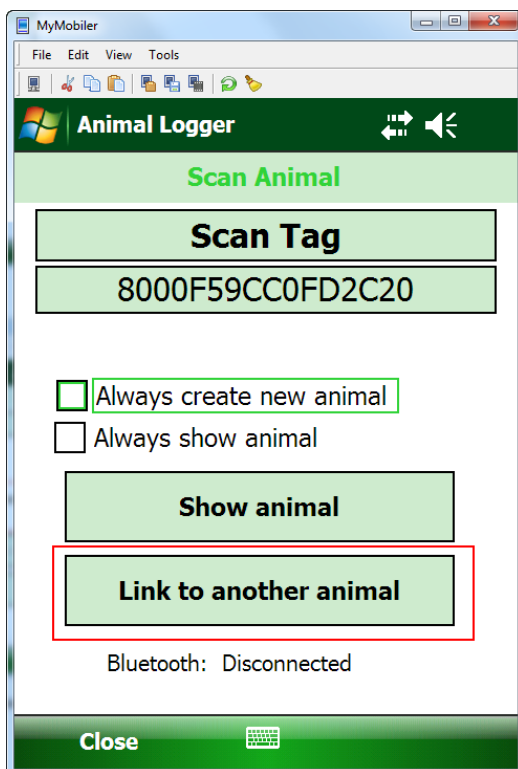

1. Send data to Psion
2. Launch Animal Logger – ensuring you are in the correct dataset
3. Select READ TAG

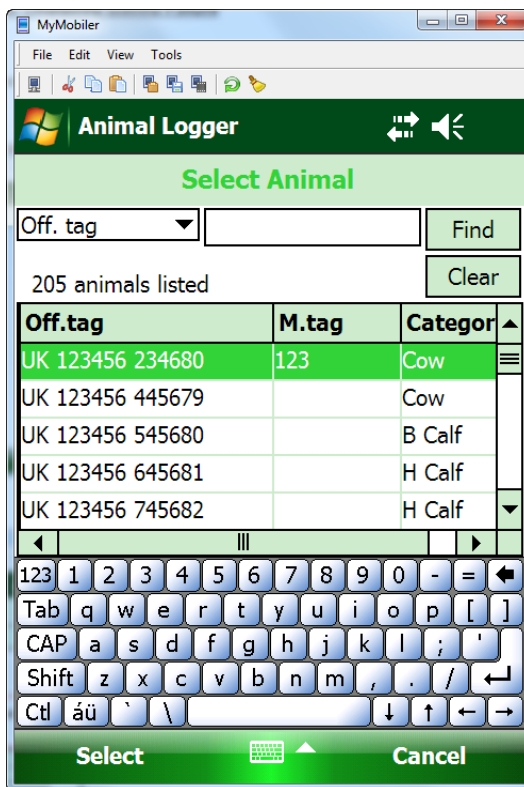

4. Untick both boxes shown

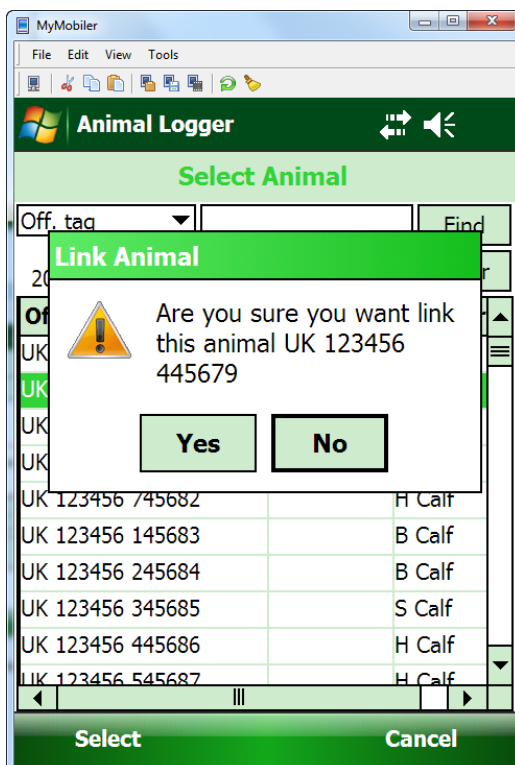

5. Scan the new tag & the select for Cattle: 'Link to another animal'

- A list of existing animals will appear – select the tag to link to or use the find function

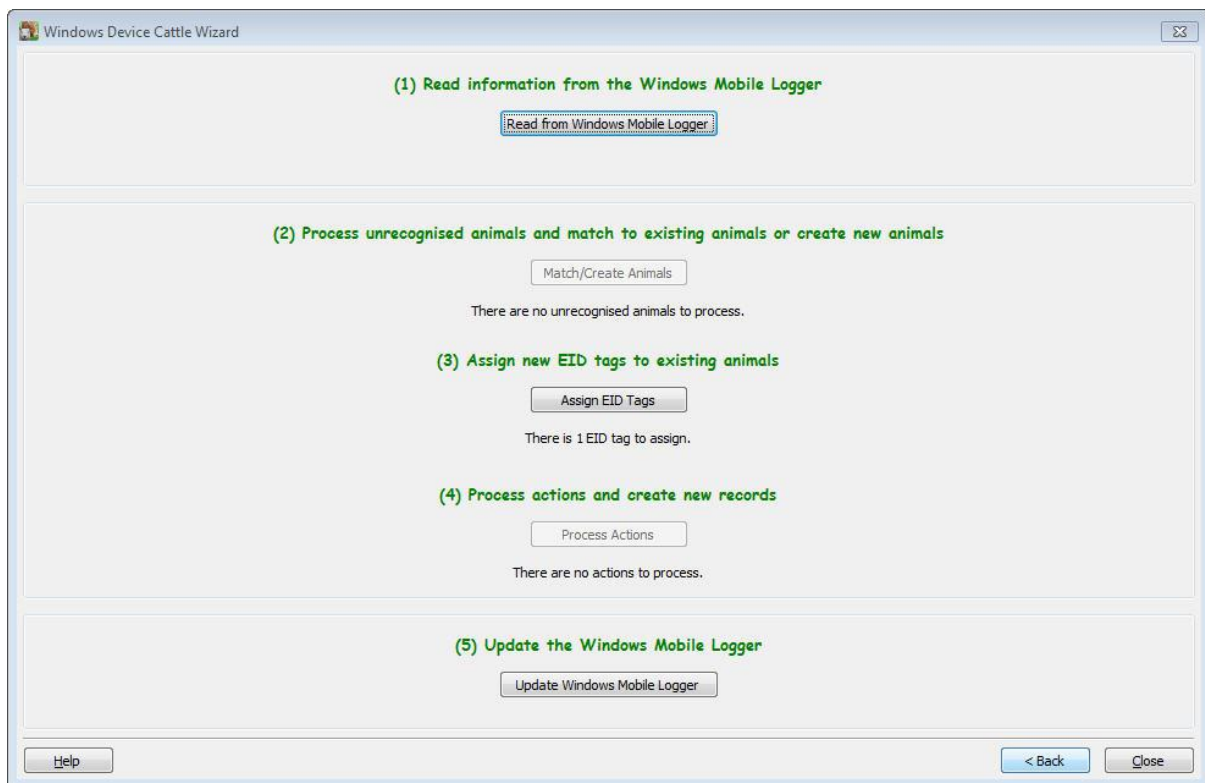

- Select the tag and agree to the message

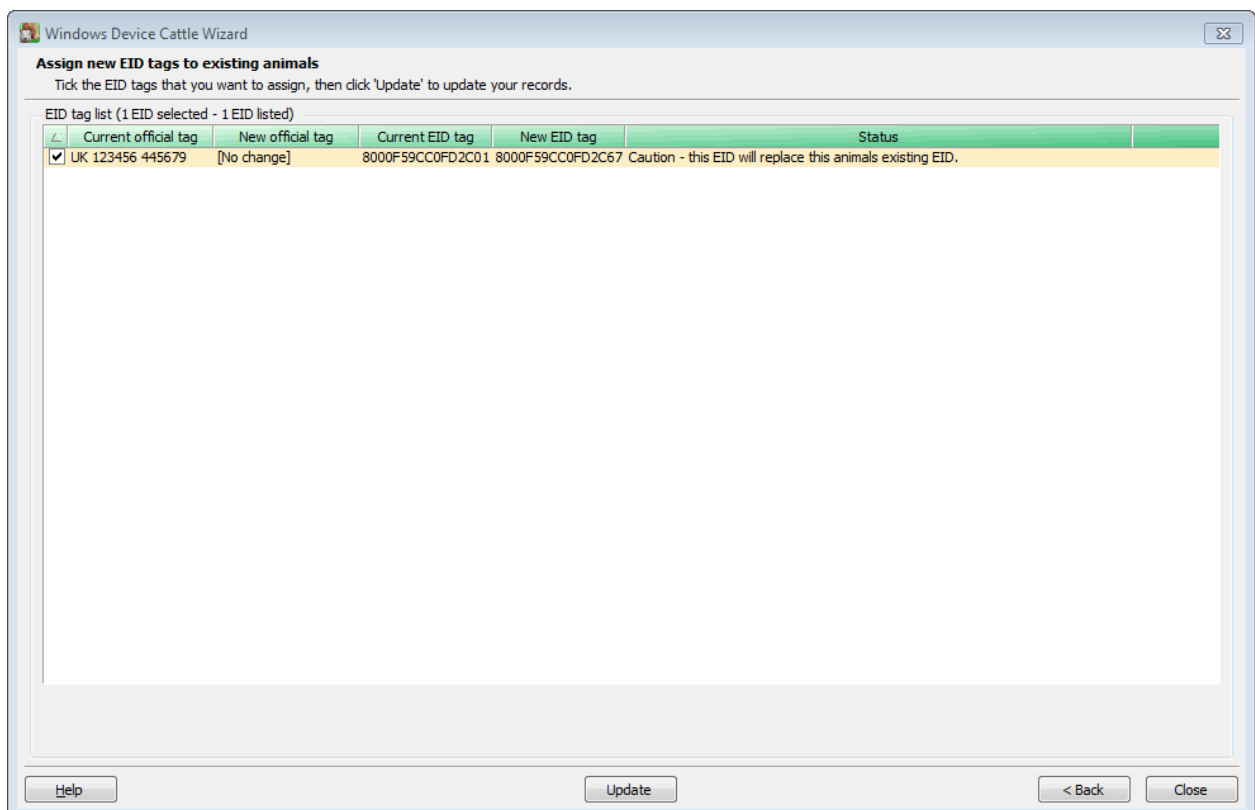

- Now to double check it has linked, rescan the tag and select 'Show Animal' this should then take you to the correct tag number that you chose previously.

9. Once all retagging complete exit the animal logger and read back into the program.

10. During the import it will clearly list the tag and EID that has been assigned to it

11. You can then double check the record card in both the Life History and in EID History as shown
