

## Show Requirements

We have a simple setup which usually takes 30 – 90 minutes – dependant on show requirements.

A standard show uses GOBO projection and music/sound cues, which are provided on a USB memory device or in advance via MP3 file transfer. These will be used with the venues PA system.

### Technical/Sound:

Shure SM58 or similar wired mic on stage (not wireless).

Off stage mic for announcements – which can also be used as a secondary/backup mic, the lead should be long enough to be used on stage.

Most shows are recorded with a camcorder. We will require a feed from your sound desk into our zoom device or camcorder.

Full PA system with onstage monitors, compatible with a provided USB memory device or play supplied MP3 files. LuvEntertainment do not expect to bring any additional equipment.

Two-way means of communication between our team members and light/sound engineers.

### Stage/Lighting:

Raised stage or platform for performance, providing a clear view of acts to the audience.

Good comedy lighting providing a whitewash of the whole stage with no patches of darkness in the performance area.

Show state to only light up the first 2 rows of the audience - the whole room should not be lit up during the performance.

Small table/stool on stage to hold drink and tall stool suitable to sit on.

We use A & B size glass GOBOs & project up to 4 images during an event. Venue to provide LED uplighters.
