Guidance Notes

Moisture levels between 0 and 15% - No cause for concern

Moisture levels between 15 and 20% - May require further investigation. Compare with average readings and consider a recheck of the area in three months

Moisture levels between 20 and 25% - Will identify areas possibly needing remedial work. There may be signs of water ingress or evidence of moisture. Compare with average readings and consider a recheck of the area in three months

Moisture levels between 25 and 30% - indicates that moisture ingress is occurring, and remedial action is necessary

Moisture levels more than 30% - Indicates that structural damage is probable and deterioration inevitable. Remedial action is necessary

Comments and Recommendations

Weather conditions:

Technician:

Date:

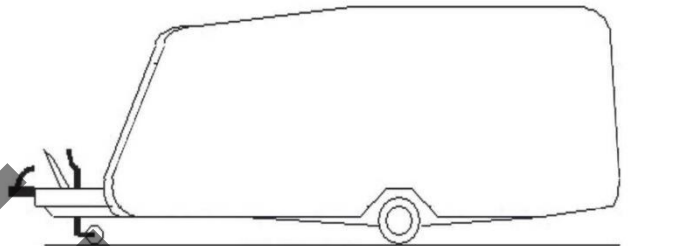

Please Note

We would emphasise that the above report accurately reflects the condition of your tourer at the date stated. These readings may be subject to atmospheric conditions and the company cannot accept any liability for water ingress, which may become apparent at a future date.

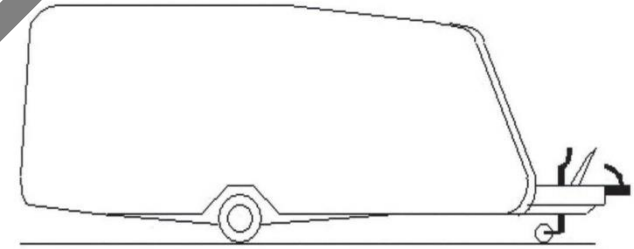

Completed in line with the NCC damp testing matrix and carried out in accordance with the latest AWS Tourer Standard Working Procedures and manufacturers guidance in relation to areas required to test.

Only the inside of the habitation unit is tested.

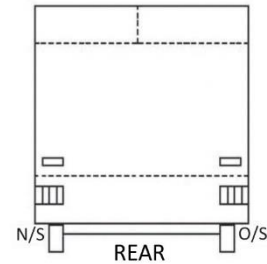

Personal belongings will not be removed from lockers and storage areas, which may limit the scope of the damp report.
