At the end of the 1960's, refuse collection with traditional bins had reached its limit. As the leading manufacturer of waste management systems, SULO introduced the wheeled bin system at the beginning of the 1970's and thus revolutionised refuse collection. Today, the unique wheeled bin system is the established standard worldwide.

SULO offers a complete range of 2-wheeled container systems, with volumes ranging from 35 (VARIO) to 360 litre. With decades of experience in product development and product advancement, we are constantly developing innovations for refuse collection. We apply the latest technologies, including computer simulation. Our main focus is on safety, quality and the ergonomic handling of containers.

Our modern and high-performance manufacturing facilities ensure consistent quality to the highest levels. SULO containers are proven a million times over and have distinguished themselves through functionality, robust construction, safety and long service life.

SULO

2-wheeled container systems

Safe and durable - reliable and comfortable

MATERIAL + CONSTRUCTION

The plastic used is a specially developed HDPE (High Density Polyethylene).

SULO containers are resistant to decay, frost, heat and chemicals.

All metal components (axles and accessories) are corrosion resistant.

The wheels are especially silent due to solid rubber tyres and reduced axle play.

All materials are recyclable.

All SULO containers are compatible with weighing and identification systems.

SULO containers are available in standard colours of grey, green, brown, blue and yellow. Special colours are available on request.

QUALITY

SULO Umwelttechnik is certified in accordance with DIN EN ISO 9001:2000. This guarantees our customers a recognised and certified quality management system.

All SULO containers are of course manufactured in accordance with DIN EN 840 standards. They also meet higher standards such as the Norm Francaise (NF) and have been awarded the quality mark RAL GZ 951/1, the highest quality standard for refuse containers. The tests are carried out by independent institutes and exceed the demands of EN 840. This guarantees the best quality, long service life and safety of the containers.

SAFETY + HANDLING

The specially developed rim with its double angle rail guarantees the highest safety during emptying and is fitted as standard with a chip nest in accordance with RAL 951/1.

The continuous handle and the comfortable grip height ensure easy handling.

The open wheel case prevents the accumulation of dirt, and the wide chassis and external position of the wheels, as well as the galvanised, solid axle, ensure the renowned stability of the containers.

Smooth surfaces and rounded internal corners facilitate cleaning.

Special ribs ensure safe and efficient stacking, reducing the cost of transport and storage.

The perfectly designed water flow from the lid prevents water from entering the bin when opening the lid. A drip rim underneath the lid ensures that condensation does not accumulate on the rim of the bin, thus preventing the lid from freezing in cold weather.

SULO

2-wheeled container systems

Innovative and flexible - for all purposes

EURO 2 LID

In addition to the well-known standard lid, SULO also offers its EURO 2 lid.

As well as having an innovative and attractive shape, the EURO 2 lid offers some distinct advantages. The grip rail makes the lid easy to open from all positions.

It has a large, flat surface for customised markings. The optional identification clip offers cost-efficient container pool management. A change of fraction or use of a container can be achieved simply with a coloured clip, rather than exchanging the lid or even the container.

VARIO SYSTEM

The increasing separate collection of different kinds of refuse and recyclable materials demands more flexible container systems. SULO developed the patented VARIO system with this in mind. It enables quick and easy adjustment of the container volume by the use of the VARIO insert. Two basic container sizes, 120 and 140 litre, and five inserts of 35, 40, 50, 60 and 80 litre are available. With the VARIO system efficient refuse collection is easily accomplished.

ACCESSORIES

A comprehensive range of accessories is available for SULO 2-wheeled container systems.

Various lid lock options, apertures, wheel options, individual markings and more offer the perfect customised solution for all possible applications.

Our complete range of accessories is contained within a separate brochure.

SULO

SULO - Your competent partner

SULO is your competent and powerful partner for the present and future demands in waste management.

In addition to our comprehensive range of products, we offer a range of services including transport and distribution, assembly, financial services and public relations.

Our complete product range comprises plastic and steel refuse containers as well as underground systems, city furniture and innovative weighing and identification systems for all aspects of collection logistics.
