About This Document

This is an overview of the technical aspects of the release that require new or changed configuration, and is intended for use by those with previous experience of installing Ideagen Pentana Audit and Retain.

Changes

SSO via SAML

There have been changes to the content of the file *SamMvc\Web.config*. This file now requires configuration.

If you are upgrading from an earlier version then you will need to copy in the new version of this file.

In the new file it is necessary to update the two placeholders, both of which are the same as used in the other config files:

[SQLServerInstance] – this is the servername\instancename

[FBA_Auth_DB] – this is Pentana Audit database name
