

Ideagen Pentana Web 5.4 Release Notes

Generated on 06 February 2019 at 10:19

Headline Changes

Key	Type	Description
VIS_WEB-926	Improvement	Controls can now be linked to more than one Risk (within the same Process) and these so-called "Linked" Controls are handled throughout the applications. If customers wish to use only "Normal" Controls (i.e. ones linked to a single Risk) the interface, reports and analysis are all unaffected.
VIS_WEB-965	Improvement	Entity Risks/Controls are now assessed using the relevant Local Matrix Configuration if one has been specified.
VIS_WEB-976	Improvement	The Risk/Control Matrix now displays the Local Matrix Configuration (when applicable) and allows the user to toggle to show where those same records appear on the Group Matrix.

Major Changes

Key	Type	Description
VIS_WEB-680	Improvement	The FBA administrator can now configure how long a password reset link remains valid (the default is 24 hours).
VIS_WEB-741	Improvement	Any Data Grid can now be exported to Excel providing a basic "reporting" function throughout the Web UI.
VIS_WEB-892	Improvement	When navigating "back" to the previous screen any recently applied Filters, Navigators, Columns and Sorts are re-applied (rather than displaying that screen as it was when it originally loaded).

Minor Changes

Key	Type	Description
VIS_WEB-1005	Improvement	The "Make Assessment" button on the "Assess Register" screen has been made more prominent.
VIS_WEB-1009	Bug	The Matrix screens have been improved to render correctly/wrap vertically on screens with low resolution.
VIS_WEB-1011	Bug	The Web Property Grid could not handle showing a (read-only) segmentation up a path (e.g. EntityObjective.Template\ObjectiveTemplate.AuditTypes).
VIS_WEB-1020	Bug	Cross References between ORCTs were not always handled correctly when performing a Get from Entity (to another Entity) in the Web UI.

VIS_WEB-1024	Bug	An error occurred if the database contained two Language Packs using the same culture.
VIS_WEB-1048	Bug	The Interested Party Names field was missing from the Action Data Grid Column Picker.
VIS_WEB-645	Improvement	An equivalent of the "My Detail" Dashboard Widget has been added to the "Account" section in the Web.
VIS_WEB-674	Bug	Large text fields (e.g. plain text versions of Rich Text fields) now appear word-wrapped when they appear on a Data Grid.
VIS_WEB-702	Improvement	Text Filters can now be applied by pressing Enter (as well as clicking the Apply button).
VIS_WEB-708	Improvement	There is a new System Setting (with a default value of 20) to allow the administrator to choose the Page Size which applies to most Web Data Grids.
VIS_WEB-785	Improvement	An URL can now be constructed to jump the user to one of the "dashboard" screens such as "Action Tracking" or "Entity Risk Management".
VIS_WEB-844	Bug	Focus did not move correctly when answering a numeric Question within a Questionnaire.
VIS_WEB-864	Improvement	The Guidance associated to each field is now displayed on the Web Property Grid by clicking on the field name.
VIS_WEB-871	Bug	Carriage returns were not always saved correctly when entered as part of a Text Answer for a Questionnaire.
VIS_WEB-907	Bug	Any Text Filter applied was not being saved correctly as part of the View.
VIS_WEB-916	Bug	The Parent Info panel displayed incorrectly if the user did not have permission to view one of the parent objects.
VIS_WEB-919	Bug	Plain text buddy fields (for a Rich Text field) were not displaying correctly if they contained carriage returns, etc.
VIS_WEB-922	Improvement	The "Parent Information" Tab has been redesigned to make better use of screen real estate and to accommodate Linked Controls.
VIS_WEB-931	Bug	An error occurred when doing a "Get" (or "Refresh") of Entity Risks/Controls via the Library (or another Entity).
VIS_WEB-933	Improvement	The "Home" button on the FBA Password Reset screen can now be configured to take the user to the Web UI Home screen (if present) rather than back to the FBA Home screen.
VIS_WEB-949	Bug	The user's Login End Time was not being updated when they explicitly logged out of the Web UI.
VIS_WEB-950	Bug	The Finding Effort and Cause Rich Text fields were incorrectly being shown on the Column Picker.

VIS_WEB-958	Bug	Attachments were not uploaded correctly if their file name contained an accented character resulting in them being corrupted and having zero size.
VIS_WEB-960	Bug	An error occurred when downloading a file (i.e. an Attachment) when the file name contained an unusual character (e.g. # or &).
VIS_WEB-975	Improvement	The "Current Action Update" widget (on the Action Detail screen) now shows/hides fields from Staff/Contacts the same as the Property Grid and Column Picker.
VIS_WEB-979	Bug	Value-dependent segmentations were not supported if the parent field (i.e. the one determining the allowed values) was on another (parent) object.
VIS_WEB-981	Bug	Date fields with no Time element (e.g. Action Current Due Date) could display incorrectly due to it incorrectly compensating for the server's time zone.
VIS_WEB-985	Improvement	There is a new System Setting to allow the administrator to control which additional characters are allowed to be typed into Web text fields.
VIS_WEB-986	Bug	The Business Owner Filter was not displayed correctly when navigating to the list of Entity Risks (or Controls) from the "By Business Owner" Count Widget.
VIS_WEB-987	Bug	Boolean fields were not displaying correctly when added as columns to a Data Grid, the green tick was being displayed whether the value was true or false.
VIS_WEB-998	Bug	The Entity.Retired field was missing from the Web UI Data Grid Column Picker.
