TR - Seramik ve taşıyıcı parçalar kendi içinde yüke dayanım standartlarına göre test edilmiştir. Ürünün duvara bağlantısı, duvar tipine ve kalınlığına göre özel dübel seçimi gerektirir. Duvarınızın ve duvara bağlantınızın 150 kg yüke karşı dayanıklı olduğundan, duvar kalınlıklarının uygun olduğundan emin olunuz.

EN - Ceramic and carrier parts have been tested in accordance with load-bearing standards. The connection of the product to the wall requires selecting special dowels on basis of the wall type and thickness. Make sure that your wall and your connection to the wall can bear a load of 150 kg and that the wall thicknesses are appropriate.

DE - Die keramischen und Trägerelemente wurden im Einklang mit den Belastbarkeitsstandards getestet. Die Verbindung zwischen dem Produkt und der Wand erfordert die Auswahl spezieller Dübel, gemäß dem Typ und der Dicke der Wand. Vergewissern Sie sich, dass Ihre Wand und die Verbindung zu der Wand eine Last von 150 kg tragen kann und, dass die Dicke der Wand für solche eine Last geeignet ist.

FR - Les pièces de céramique et de support ont été testées dans le respect des standards de résistance aux charges. La fixation du produit au mur nécessite la sélection de chevilles spécialement adaptées au type de mur et à son épaisseur. Assurez-vous que votre mur et votre fixation au mur peuvent supporter une charge de 150 kg et que l'épaisseur du mur est suffisante.

RU - Керамические и несущие части испытаны в соответствии со стандартами несущей способности. Крепление изделия к стене требует выбора специальных дюбелей в зависимости от типа и толщины стены. Убедитесь, что ваша стена и ваше соединение со стеной могут выдержать нагрузку в 150 кг и что толщина стены подходящая.
