

Polar habitats are located at the very top and very bottom of the Earth. They are cold, windy and have a lot of snow and ice. It's even too cold for trees to grow.

Hibernation – a deep sleep that animals take during cold months; they don't need to eat much or to be too warm, so hibernating helps them survive times when it's very, very cold in the winter.

What are the similarities and differences between life in this country and life in other countries?

Natural world

Seasons-spring, summer, autumn and winter.

Rainforests are a kind of **forest habitat**. They are found in warm places, and are full of many tall trees and leafy plants. It's called 'rainforest' because it also gets a lot of rain every year, helping all the plants grow.

Deserts are places that don't get much rain, and are very dry.

Habitats: Savanna. This habitat is like a **grassland**, but also has some trees. Savanna's have a dry season when wildfires are common. This habitat is found around the equator
