

Dalton School

Have you recently stopped to wonder how magical different times of the year are in Dalton? We are so fortunate to be able to observe the different seasons in our local environment. At this time of the year we are able to admire the beautiful colours and observe the changing weather.

In order to experience the changes through the seasons our children have been exploring the outdoors around the school building recently.

The Early Years children investigated the different sizes, shapes and colours of the leaves.

The gardening club have been identifying the different trees found in our school grounds. They were delighted to find out how many different species there are. They found ash, sycamore, silver birch, oak, elder, hawthorn, hazel and rowan trees or bushes within the school grounds. They also identified horse chestnut trees at the side of the Church. Perhaps they will see signs of a holly tree if they look carefully....

One of the jobs for the gardening club has been to gather the leaves from the ground and prepare the school grounds for winter.

They also made leaf creatures with the different variety of leaves.

Miss Dowling's class have been searching for mini beasts around school. They have been learning all about the work of David Attenborough and trying to follow his advice by looking carefully at the world around them.

The children at the 'Wild Outdoors' after-school club have also been busy outside!

One of their favourite tasks was building shelters on the Church field.

We look forward to the next season and observing future changes in our locality.
