

A world of colour and pattern  
Topic Term 1b

We used primary colours, red blue and yellow to paint an array of beautiful flowers.

We designed our own patterns for the Elmer's Day Parade.

We mixed our own colours, shades and tones, adding white and black to primary colours.

## The science behind colour and light

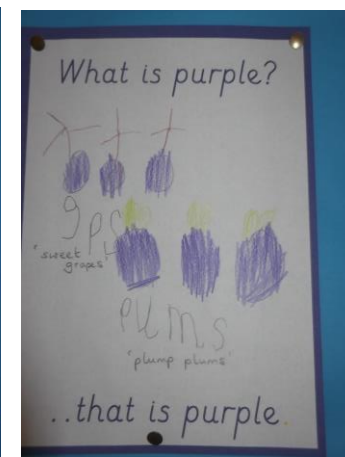

We explored colour and colour mixing using acetates and prisms.

The children have investigated which colours show up best in the dark using our dark den and torches.

They also investigated reflective materials sorting various objects into shiny and dull groups.

We enjoyed being creative with poetry, paint, collage, graphics programmes and threading.
