

Dalton School

We are delighted that our Nursery is thriving, providing pre-school provision for children in our community.

This term the children have been learning about dinosaurs.

They were fascinated to try 'excavating' for dinosaur bones in the sand. The children used special tools and brushes to carefully brush away the sand to find the bones.

Harrison used the dinosaur bones to make a dinosaur skeleton, using chalk to add the head.

Another day, the children found frozen dinosaur eggs. They were really excited to use special tools to crack open the eggs.

Using bubble-wrap and paint, the children were able to paint the different textures in the dinosaur skin.

Dinosaur footprints were made using different coloured paint.

It was good fun to use paint and foam to make a dinosaur land. This helped the children identify colours and explore what happens when different colours are mixed.

Afterwards the children made a dinosaur landscape outside.

Thank you to the PTFA who raised money to pay for the children to visit the Lowry theatre in Salford to watch 'George's Marvellous Medicine'. Everyone thoroughly enjoyed their experience.

'The acting, singing and dancing was amazing! Thank you to the PTFA for arranging the trip'

Milly
