Slime FUN

Science week was enjoyed by all at Holme Upon Spalding Moor school.

Year 1 and 2 embraced science week and carried out lots of experiments and investigations thinking about the theme exploration and discovery. They made predictions and took part in some exciting demonstrations.

Classes throughout the school enjoyed various different activities throughout the week and making slime featured heavily.

Classes 7,8 and 9 worked together and created **slime** pets which they put to work finding out about the characteristics the pets possessed. Who had the most stretchy? Whose snapped most easily? Which was the messiest?

Poo from the past

For most people, the idea of finding old human poo is disgusting; and the idea of cutting it up and looking at it through a microscope is even worse! But this is exactly what some archaeologists do to help us understand what people ate in the past, and how they prepared their food.

Class 4 and their coprolites

CRODA VISIT

This term

Classes 7,8 and 9 were lucky enough to work with some 'real, live' scientists from CRODA. They were learning to work together and cooperate. The children enjoyed the challenge of fair testing and enjoyed working together.

Foundation stage were fully involved in Science activities. Sparkly slime, scented slime and colour mixing were just a taste of the activities enjoyed.

Who will win the Great British Scientist treasure hunt?

So what have British scientists contributed?
