

58.0

Firefox Release
Januari 23, 2018

Version 58.0, first offered to Release channel users on January 23, 2018

With this release, we're building on the great foundation provided by our [all-new Firefox Quantum browser](#). We're optimizing the performance gains we released in 57 by improving the way we render graphics and cache JavaScript. We also made functional and privacy improvements to Firefox Screenshots. On Firefox for Android, we've added support for Progressive Web Apps (PWAs) so you can add websites to your home screen and use them like native apps.

Thank you to all of the [new Mozillians](#) who contributed to this release of Firefox!

new

Performance improvements, including:

- Rendering graphics for Windows users by using [Off-Main-Thread Painting \(OMTP\)](#)
- Loading pages faster by changing how [Firefox caches and retrieves JavaScript](#)

Improvements to Firefox Screenshots:

- Copy and paste screenshots directly to your clipboard
- Firefox Screenshots now works in Private Browsing mode

Added support for [credit card autofill](#)

Added Nepali (ne-NP) locale

New features and improvements:

MO-1 - User shall be able to login to solution

MO-2 - Email template for login success

fixed

Fonts installed in non-standard directories will no longer appear blank for Linux users

Issue fixed:

MO-6 - Not able to load more than 1000 users

MO-8 - Wrong icons on user table

changed

User profiles created in Firefox 58 (and in future releases) are not supported in previous versions of Firefox. Users who downgrade to a previous version should create a new profile for that version. Learn about [alternatives to downgrading](#) on our support site.

Added a warning to alert users and site owners of planned security changes to sites affected by the [gradual distrust plan](#) for the [Symantec certificate authority](#)

developer

Implemented the [PerformanceNavigationTiming](#) API

Added [PerformanceResourceTiming.workerStart](#) so sites can measure service worker startup time

unresolved

Users running Firefox for Windows over a Remote Desktop Connection (RDP) may find that audio playback is disabled due to increased security restrictions. [Learn how to mitigate this issue](#) until it is corrected in an upcoming release.

Users running certain screen readers may experience performance issues and are advised to [use Firefox ESR](#) until performance issues are resolved in an upcoming future release
