

Introducing - Kano OS 2.0

Fresh Minecraft challenges, new Pong powers, all-new Make Art and a sweet Character Creator

Updating is easy

Click the  in your taskbar at the bottom right of your screen to get the update

Simple - sit back, relax, grab an ice cream, do some coloring in above and make yourself a cool custom case card while your Kano reboots with new powers!

If you get stuck email help@kano.me

The hacker way to update

Open Terminal and type `sudo kano-updater` and hit enter! (the default password is kano)

Make a case card

A new operating system needs a special case card to truly make it stand out!

Get an adult to help you cut out the template and then go wild. Pens, paint, stickers, glitter... whatever you can lay your hands on!

Just pop it on top of your Kano, in place of the speaker to show it off
