Crossland Tankers

For over 20 years we have been building the highest quality tankers for a vast range of industries and applications. During that time we have developed a highly skilled and experienced workforce that uses only the finest materials and most advanced manufacturing techniques to deliver tankers our customers know will perform to their expectations.

With purpose-built plants at Swatragh, Northern Ireland and Burnley, Lancashire, we have grown into one of Europe's leading and most respected manufacturers of tankers, renowned for quality, innovation and reliability. Vehicles are manufactured to ECWVTA and certified to ISO 9001 and 14001.

Why Crossland?

Why do our customers keep returning? Because we understand what they want. Working with dedicated members of our sales and design teams they are involved throughout the manufacturing process, from conception to completion. That means we can create tankers that match our clients' precise requirements, developing new solutions that deliver real value with the guarantee of quality that has become a Crossland trademark.

What makes us stand out from the crowd? It's so many things, like the pride we take in our craftsmanship, the bespoke approach we take to our clients' needs and the longevity of the tankers we make.

Best Of Both Worlds

We count many of Europe's largest food producers and dairies, leading transport companies, major hauliers and hire companies among our loyal customers. With teamwork at the core of our approach, we offer the friendly and personal service you would expect from a family business with the versatility and resources of a major manufacturer.

Reliability

Our tankers are built to last! Constructed with top quality materials they are subjected to the most rigorous testing right through the manufacturing process. From X-raying the welds to pressure testing and the most demanding pre-delivery inspections, we ensure every tanker meets our exacting standards. What does this mean for our customers? Minimum maintenance and the most robust tankers around!

Innovation

Our best ideas are thanks to you! Working in partnership with our customers, our designers are constantly developing ingenious solutions to meet their toughest requirements. Every member of our experienced workforce is part of a multi-skilled team, working together to constantly push the boundaries. As a result, we have been at the forefront of many innovative developments, from aluminium vacuum tankers to rechargeable electric pumps. We liaise with our customers right through the process so that we understand their precise needs. Then we deliver the solutions.

Quality

You don't get a reputation for quality like ours overnight. Our highly skilled workforce utilises decades of experience to ensure our tankers are fit for purpose. We only use premium components, sourced from our trusted suppliers. By utilising 3D modelling we can walk you through the design before manufacture so you can be sure your tanker is exactly what you want. We meet the highest quality standards in every area. Our tankers are built with pride for customers who demand the best.

Tankers

It's the extensive range of tankers we manufacture that makes us unique. Vacuum, food, milk, general purpose, chemical, bitumen and other specialist tankers can be manufactured to a multitude of international standards. The knowledge we have gained from designing such a wide variety of tankers has been a major part of our success.

Food Tankers

Why do the leading food manufacturers and hauliers choose our tankers to transport a wide range of food products? Our food tankers are designed and built to the highest standards offering the most precise and reliable temperature maintenance for the load being transported.

Manufactured to meet the highest levels of hygiene, our tankers are part of the food process, carrying products such as glucose, edible oils and alcoholic beverages. Our tanks are constructed from stainless steel and we are a WRAS approved supplier. Choose from single or multiple compartment tankers with the option of full ground level operation and a choice of hydraulic, engine or electric drive pumps. ADR and IMO certification is available for many of our food tankers.

Fire Authority Tankers

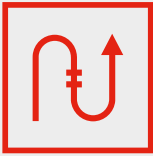

We're renowned for the range of innovative, high quality tankers we produce for fire authorities throughout the UK. All are designed for easy operation and maximum safety and efficiency.

Our fire authority tankers are manufactured in conjunction with you the customer. We get to understand your operation and requirements so we can create the solutions that meet your needs. We design fire authority tankers with a low centre of gravity to prevent rollovers, while also providing a range of storage options for ancillary equipment. Just a few reasons why so many fire authorities come to Crossland for their tankers.

We don't create a standard product, we listen carefully to the customer to fully understand their needs and provide a tailored solution.

Products

Waste Vacuum Tankers

Semi-trailer, rigid or drag with aluminium, stainless steel or mild steel barrels, we produce a large range of vacuum tankers for all kinds of purposes. With capacity ranging from 5,000 litre rigid vacuum tankers to 33,000 litre semi-trailers, we have the solution to every possible need.

The most effective way to move liquid bio-solids, hazardous chemicals and industrial waste, our comprehensive range of vacuum operated tanks are rigorously tested to ensure they are among the safest on the market. They can be built to PED or ADR. All pump types are available and have hydraulic or direct drive options. Flow rates range from 200 CFM to 4000 CFM. All tanks have the option of internal lining, tipping, as well as hydraulic or manual opening rear doors.

Milk Tankers

We provide semi-trailer, rigid or drag tankers of all sizes for the dairy industry. Our tanks are of lightweight design, offering maximum payload and ease of manoeuvrability. Various metering systems are available, along with electric or hydraulic powered pumping.

Utilising the latest technology on the market, our milk tankers come with the highest levels of insulation and temperature control. We are the industry leaders for reliability, whether our tankers are designed for farm collection or bulk transport. Our tanks can be supplied as DTAS compliant and ATP approval is available.

ADR/Chemical Tankers

When you are designing tankers capable of carrying the most hazardous of chemicals long distances, safety is everything. It is at the heart of everything we do, including rigorous internal testing and third party quality inspections throughout the manufacturing process.

As with all our tankers we go beyond the required standards so our customers have complete peace of mind when it comes to safety and security. Standard specification includes full ground-level operation and all tanks come supplied with all the necessary ADR and Insurance certification, including IMO approval if required. We offer a choice of single or multi compartment tankers with a wide range of pumping configurations and rubber lining is available for corrosive products. Crossland's European Whole Vehicle Type Approval ensures that the vehicle is legal and ready for use upon delivery.

Bitumen Tankers

Built to meet the latest bitumen safety standards, our tanks are designed to be the lightest on the market and are built to ensure that load temperatures are maintained over extended journey times.

Our tankers are manufactured from stainless steel throughout, with full ground level operation as standard. Our specifications give ample choice in layout and operation with options including full electrical trace heating of shell and pipework, vacuum loading and IMO approval. We are the go-to manufacturer for all the main bitumen suppliers and hauliers.

Products

Repairs

We all know the problems caused by damage or the need to refurbish ageing tankers. Our skilled engineers offer a full repair and refurbishment service, whether it's cosmetic or structural, re-cladding a tanker's outer skin or re-equipping it with the latest technology.

We offer a comprehensive service that covers all eventualities, from minor accident and shipping damage to major rollovers. We also carry out periodic in-service pressure tests to ADR/ PSSR.

Remount

Due to the long life cycle of stainless steel tankers, the barrel usually outlives the rigid chassis. We offer a full refurbishment and remount service, so you can have a new vehicle with a tank as good as new.

Special Projects

We are renowned for the extensive range of specialist products we manufacture for a variety of industries. Our years of experience, technical skills and innovative approach have enabled us to create specially tailored products for many different applications. They include high tipping vac tanks, hook lifts and street-wash tanks, as well as aluminium half pipe and standard ejector trailers. We also manufacture a ground breaking trailer for the milk industry that combines a bulk milk tank under a refrigerated deck; this concept can be adapted for other products.

Our range of jet vacs, gully emptiers and recyclers incorporate full PLC control for ease of use, reliability and safety. We also supply various vacuum pump, jetting pump, reel combinations, booms and multiple drive options. ADR certification is also available if required.

Many of us have been here since day one and it is that dedication, loyalty and knowledge that has brought us our success.

Customer & Community Service

Our dedication to health and safety permeates everything we do, from the way we work to the tankers we create. We pride ourselves on our happy work environment and that's good for everyone. A happy, healthy workforce ultimately means a better product for our customers.

People

Our regular in-house training ensures that our team are ahead of the game when it comes to the latest developments in their areas of expertise. As well as constantly upgrading their skills, we also provide comprehensive safety training and have procedures in place to ensure important issues are highlighted as they occur.

Education

We work in partnership with higher education institutions locally to develop talent. Many of our most experienced staff began with apprenticeships here at Crossland.

Environment

We don't just believe in green, we live it! Most of the energy we use is renewable, with electricity sourced from both PV cells and wind turbines. Among many practical measures we take to reduce our environmental footprint, we constantly review our production procedures and targets to reduce waste in our daily operations.

Community Service

Our community ethos is at the heart of all we do. Mostly recruited from the local area, our staff are with us for the long term. Welfare is at the heart of our approach and we take every step to ensure a healthy life/work balance. Our contribution to charitable causes is another integral part of our approach. We are proud of all our staff members who take part in sponsored events, our employees regularly work for good causes near and far. Over many years we have become an integral part of the local community and greatly value our excellent relations with local people and institutions.

It's the contact with the customer I enjoy. When they call in they know they will be speaking to people who know their tanker intimately and will have been involved throughout its conception and build.

100%

In the **round**,
we're better.
