

Colours – inspired by the Sun.
Your favourite colours.

 **GRIESSER**

Choose your favourite colour.

We love light because it gives us colours and it's our inspiration source. In our brochure you will discover over 300 colour shades, ranging from ivory to purple. We can offer you all the colours of the rainbow, so you can style your sun protection however you want.

Create your colour.

Rather than being restricted to using silver, grey or black, Griesser allows you to simply choose your own favourite colour palette. If you can't see it, you can bring us your favourite photo or a sample of the colour you want. We can then recreate the shade using the colour spectrometer and blend it especially for you. This means that your sun protection can perfectly match your architecture's colour scheme.

Rich. Premium. Optimally coated.

We want our products to be long-lasting and to be suitable for use in any situation or location. That's why we developed an optimal coating for each product. It consists of the shade, the luminosity level and the texture. For colours that are rich and intense, just as you love them. For sun protection that reflects and absorbs just the right amount of light to suit the space and weather. For the final touch, For the final finish, additional particles create a particularly refined effect. For external venetians blinds, facade awnings, blinds, window shutters, rolling shutters and patio roofs that you can delight in every single day.

Years of experience under our belt as a trend-setter.

Griesser boasts the largest colour palette for sun protection. Over our 130-year company history, we have continued to hone the art of dyeing, firstly wood and later aluminium. We now have our own painting and powder-coating equipment and control the entire dyeing process. New colours are added every year. This is how we keep bang up to date – and set new trends.

Customisation with BiColor.

Two-colour coated slats – different colours on the inside and outside. For example, you can choose a colour for the outside that allows the external venetian blind to blend in visually with your façade. On the other hand, the colour of the inside can be adjusted to the specific colour of the room. BiColor, exclusively from Griesser. Dare to use colour!

Special coats for extreme locations.

To extend the service life of Venetian blinds in coastal or heavily polluted locations, they can be treated with a special additional coating. We're happy to offer you advice.

In harmony with your region.

Regional architecture sometimes dictates the shade for the exterior design of a house. You can meet this requirement really easily: You can obtain sun protection from us in any of the colours typical of regions as standard.

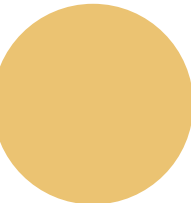

Tried-and-tested quality.

All of our paint and powder suppliers hold the universally valid quality mark, QUALICOAT.

*All samples are produced with standard print colors and may therefore deviate from the original color shades. Subject to change without prior notice.

Sustainability at Griesser.

Griesser is now one of Europe's leading suppliers of high-quality solar shading products. Founded in 1882, this eco-friendly and innovative company has always stayed true to its values.

We're already doing a great deal to ensure a bright future: Griesser is not only one of the most important suppliers of premium sun protection solutions in Europe, but also one of the most enduring ones.

For us, sustainability isn't just a buzzword; it has been engrained in our company practices for a long time. Our environmental protection and sustainable development values are evidenced through our everyday actions. At our main location in Aadorf (Switzerland), we produce solar power on the roof of our new powder-coating plant. And we remain 'clean': Our unique aluminium strip coating system cleans the aluminium strips without any chemicals and saves considerable amounts of water.

We also keep a close eye on our suppliers. We think it's important that our suppliers adopt the same approach as us. For powder-coating, we work in partnership with TIGER. This company is just the same as we aspire to be: energy saving. This is why TIGER installed LED and motion sensors, cools production equipment by means of groundwater wells and heats using the warmth of the machines.

Brillux, our partner for liquid paints, has held the universal Blue Angel quality mark since 1978 for particularly environmentally friendly products. Furthermore, Brillux focuses on photovoltaics and cogeneration, heating offices, production halls and storage areas with production energy. By using a special cleaning technique, the company keeps water usage to a minimum.

Since the 1960s, Mäder, our paint supplier for Venetian blinds, has been developing and producing water-based paints. These products do not pollute the environment with volatile organic compounds. Moreover, Mäder installed air purification equipment at its Killwangen (Switzerland) location back in 2006, thereby significantly decreasing emissions.

Griesser has built up a partnership with myClimate over the past 15 years in order to finance projects with significant ecological, economic and social benefits. By doing so, Griesser has committed itself to energy saving – as evidenced by the accomplished and planned measures.

Recently, Griesser has adopted a more concrete philosophy, underscoring its commitment to environmental protection and sustainable development. The company has set targets for reducing its carbon footprint whilst outlining a sustainable model for the next three decades, including a fleet of emissions-free vehicles by 2030 and production sites that will become climate-neutral by 2035. And things are already under way...
