

Window shutters from Griesser.
Wing shutters with installation frame

Wing shutters with installation frame

When things are pre-assembled at the factory, things go all the faster at the construction site. This is what makes pre-assembled installation frames the first choice for many customers. The sashes are already fastened to the installation frame at the factory with the proven SystemFix installation system. Attach it to the window, fit the wing shutters and you're done!

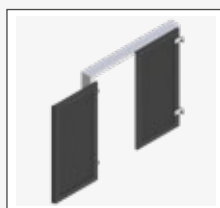

No thermal bridges

Adjustable frame
thickness

Simple installation

Three-sided or four-sided
installation frame

Integrated insect screen

Product Highlights Installation Frame

PRODUCT ADVANTAGES IN DETAIL

Integrated insect screen

In addition, the installation frame combines the advantages of easier installation with an integrated insect screen roller blind. The protective roller blind can be opened and closed as often as you like, and offers an elegant, space-saving and – even when the window is open – permanent protection against insects. Operation is accomplished using an ergonomic grip bar with integrated stop function.

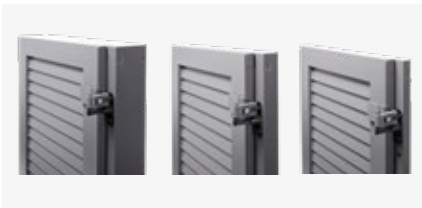

Simple installation

The sashes are already preinstalled on the installation frame at the factory with the proven SystemFix installation system. Mount the installation frames on the window, fit the wing shutters and you're done! The fastening of the installation frame must be approved by the window manufacturer.

No thermal bridges

Because the installation frame is installed directly on the window frame, no thermal or acoustic bridges are formed. The sashes are locked in optimal fashion.

Adjustable frame thickness

A variety of installation frame widths are available. We find the suitable version for you to match the soffit depth.

Installation frame - three-sided or four-sided version

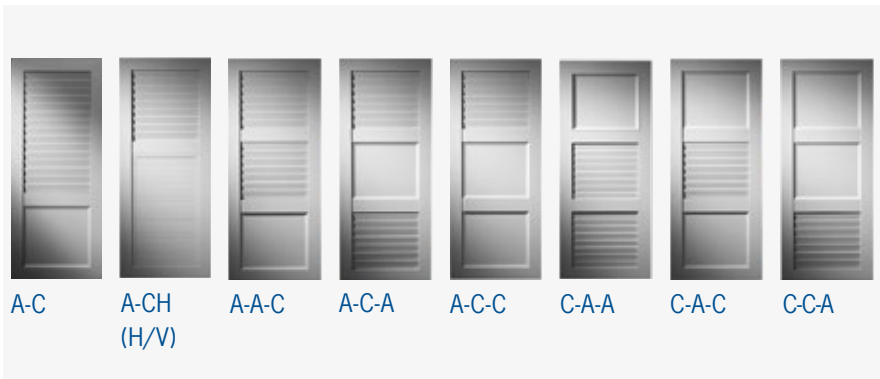

Depending on the window situation, a three-sided or four-sided installation frame is installed.

WINDOW SHUTTER TYPES

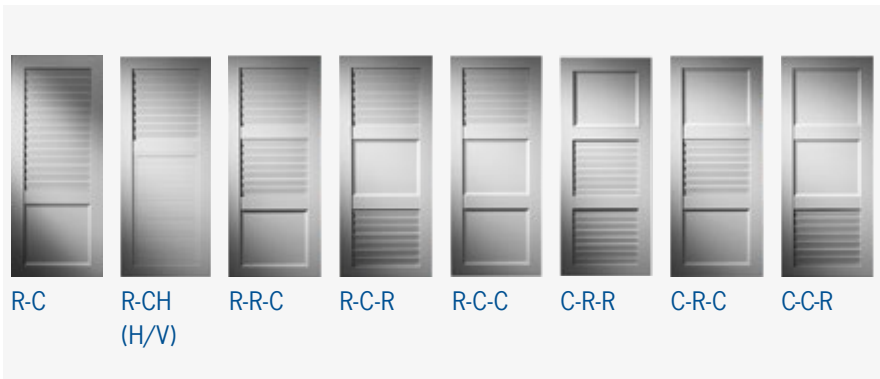

Fixed slats

COLORS

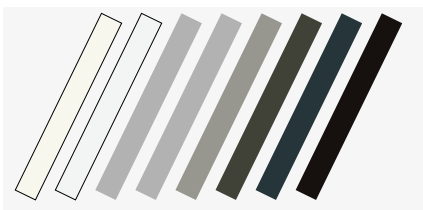

The colors of our window roller shutters should reflect your wishes, lend distinction to the character of the architecture and create a personal atmosphere. These wishes are a daily challenge to our developers, planners and lacquerers.

Powder coating

The powder coating of aluminum has proven to be an environmentally friendly, cost-appropriate and long-lasting alternative to lacquering. It is resistant to both impacts and weather.

WOOD MATERIALS

In addition to the colors, a variety of structures is also possible. The unique feature here is the wood decor: It convinces not only by its astoundingly true-to-nature appearance, but also by its convincing weather resistance.
