

Double Your Forces In SARS-CoV-2 Detection.

Meet our new rapid test,
the direct alternative to PCR.

Cormay Rapid SARS-CoV-2 ANTIGEN Test Kit

Faster and effortless diagnostics of an active COVID-19 disease phase.

Detects the active infection with SARS-CoV-2
in human nasopharyngeal and oropharyngeal swabs.

In line with WHO's
recommendations

Direct alternative
to PCR Tests

Results in
15 minutes

Economical

Proven
performance

Clinically proven Ag-RDTs performance, superior to WHO Recommendations for antigen tests. The direct substitution of PCR in active COVID-19 phase diagnostics.

Proven Correlation to PCR, the gold
standard of COVID-19 diagnostics.

	Result
SENSITIVITY	95,15%
SPECIFICITY	98,5%

CORMAY: Protect Life, because Life is a Treasure
35 Years of Bringing Innovation & Technology to IVD

The fight against global COVID-19 pandemic exposes the high importance of widespread, reliable and fast testing for COVID-19.

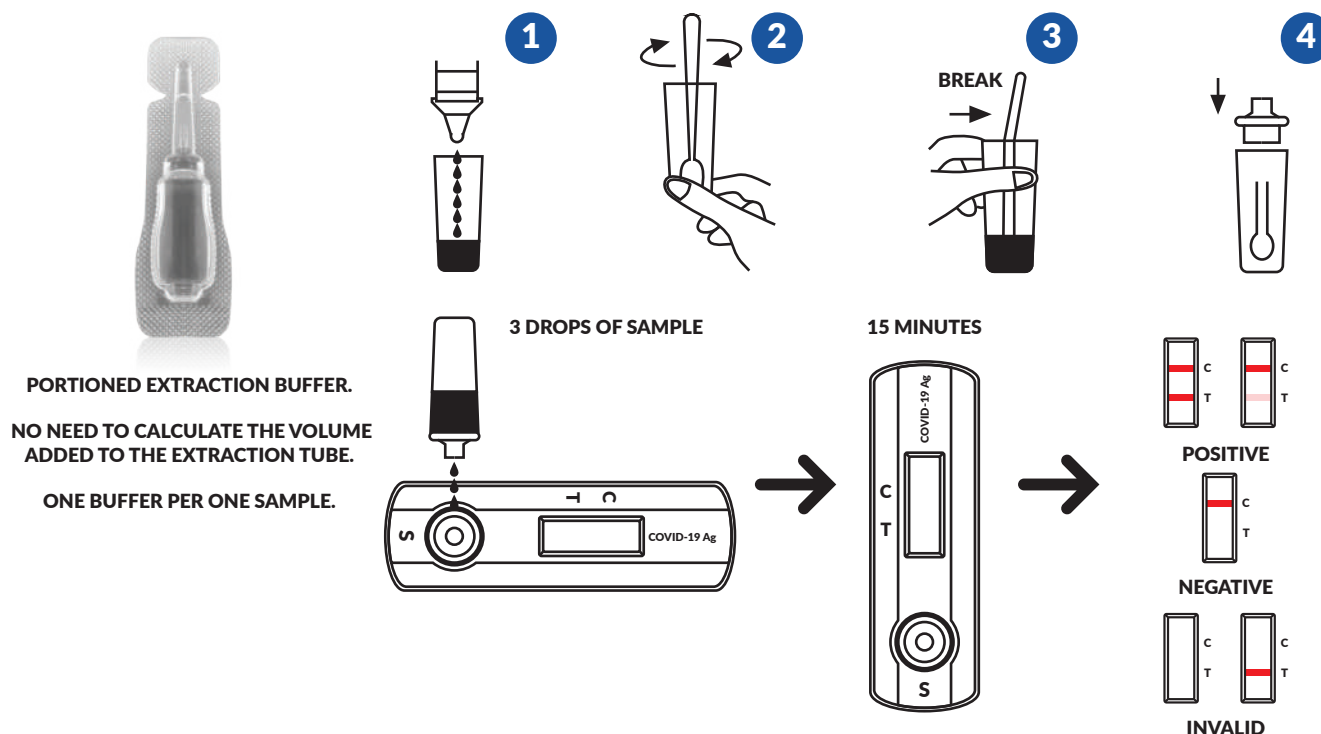

The ease-of-use and rapid turnaround time of **ANTIGEN** Rapid Tests

Great potential to expand access to testing and decrease delays in diagnosis by using antigen testing of patients with early symptoms.

The alternative to molecular testing and ideal diagnostic solution to:

- support outbreak investigations (e.g. in closed or semi-closed groups including schools, care-homes, cruise ships, prisons, work-places and dormitories)
- monitor trends in disease incidence in communities, and particularly among essential workers and health workers during outbreaks
- early detect and isolate the positive cases in health facilities, COVID-19 testing facilities, care homes, front-line and health-care workers
- testing of asymptomatic contacts
