

LINKING ENVIRONMENT AND FARMING

BASIS Introduction to IFM and LEAF Marque Training

E W Davies, Thaxted, Essex

25th and 26th September 2019

This two-day LEAF training course covers all aspects of Integrated Farm Management and the LEAF Marque Standard. During the course we cover the nine areas of Integrated Farm Management, what to consider and plan in each section as well as the requirements for these under the LEAF Marque Standard. This is a BASIS accredited “Introduction to IFM” course and following the two days, participants are invited to take an online test to receive their certificate. The BASIS IFM and LEAF Marque course acts as an ideal course for those looking to find out more about Integrated Farm Management or become LEAF Marque certified. The course also offers an in-depth analysis of Integrated Farm Management in different businesses and a sounding board and refresher on the aims and processes of LEAF Marque certification for those wanting to advise others or certify businesses.

Why attend this training?

As a producer: An ideal course if you are looking to gain a greater understanding of the principles of IFM and how they can affect your business. If you are already LEAF Marque certified, the training will help refresh the process, learn from what others are doing and get more out of your LEAF membership and what IFM has to offer.

As an advisor: Attending this training will enhance your knowledge of IFM and the LEAF Marque Standard goals and requirements. This will enable you to better advise producers looking to become LEAF Marque certified or maintain this standard. Following attendance at this training and passing of the BASIS exam, LEAF Advisor/Consultant members will be added to the LEAF endorsed advisors list who we will recommend to new and existing producers.

As an auditor: This training will offer a full understanding and interpretation of the LEAF Marque Standard and the aims behind each of the control points. It will enable you to better understand what the LEAF Marque is trying to achieve, where site specificity is important and where producers may fall short, to enable you to efficiently and accurately certify LEAF Marque growers.
