Fund Manager comments

After a respite in April, the rotation towards cyclical stocks and those benefiting from the reopening of economies around the world continued in May, impacting the fund's performance. This rotation brought the majority of the fund's stock valuation multiples to their three-year average or below, offering more attractive levels to benefit from the future growth of our companies over time. In this respect, quarterly results only confirmed the favourable trend of technological disruption enabled by the rise of artificial intelligence. DATADOG, a leader in cloud infrastructure monitoring solutions, was one such case, revising its growth forecast for 2021 from +38% to a remarkable +48%. Similarly, US cloud cybersecurity company ZSCALER saw its growth accelerate over the quarter to +60% and forecasts better-than-expected growth for the year as a whole. This is a testament to the strength of the underlying trends of companies that adopt or provide artificial intelligence in our economy and makes us more excited than ever about the possibilities offered by the greatest technological, economic and social revolution of our time.
