Features
- Quad high power beams
- Smart design
  - Slim body design
  - Easy-to-see vivid interior color for optical alignment
  - IP65 waterproof structure
- Viewfinder with 2X magnification
- Various options (refer to page 12)
  - (HU-3, ABC-4, BC-4, CBR-4, PSC-4, BAU-4)
- Beam interruption adjustment function
- Tamper function

Introduction

Warning
Failure to follow the instructions provided with this indication and improper handling may cause death or serious injury.

Caution
Failure to follow the instructions provided with this indication and improper handling may cause injury and/or property damage.

This symbol indicates prohibition. The specific prohibited action is provided in and/or around the figure.

This symbol requires an action or gives an instruction.

Warning
- Do not use the product for purposes other than the detection of moving objects such as people and vehicles. Do not use the product to activate a shutter, etc., which may cause an accident.
- Do not touch the unit base or power terminals of the product with a wet hand (do not touch when the product is wet with rain, etc.). It may cause electric shock.
- Never attempt to disassemble or repair the product. It may cause fire or damage to the devices.
- Do not exceed the voltage or current rating specified for any of the terminals during installation, doing so may cause fire or damage to the devices.

Caution
- Do not pour water over the product with a bucket, hose, etc. The water may enter, which may cause damage to the devices.
- Clean and check the product periodically for safe use. If any problem is found, do not attempt to use the product as it is and have the product repaired by a professional engineer or electrician.

Models and Detection Range

<td>200m/650ft.</td>
</tr>
</tbody>
</table>

Verification

- Read this instruction manual carefully prior to installation.
- After reading, store this manual carefully in an easily accessible place for reference.
- This manual uses the following warning indications for correct use of the product, harm to you or other people and damage to your assets, which are described below. Be sure to understand the description before reading the rest of this manual.

- Warning: Failure to follow the instructions provided with this indication and improper handling may cause death or serious injury.
- Caution: Failure to follow the instructions provided with this indication and improper handling may cause injury and/or property damage.
- This symbol indicates prohibition. The specific prohibited action is provided in and/or around the figure.
- This symbol requires an action or gives an instruction.
1-2 PRECAUTIONS

Do not install the unit on an unstable surface.

Do not install the pole in a location where sufficient stability can not be ensured.

Do not install the unit in a location where trees, leaves, or other objects that may swing in the wind and block the beam.

Do not install the receiver in a location where it is exposed to direct sunlight.

Do not allow the infrared beam from another detector to reach the receiver.

Install the unit at a height where an object can be detected without fail.

The pole size should be 34 - 48 mm (1.34 - 1.89 inch).

Install the unit at least 1 m (3.3 ft.) away from the wall or fence that may be running parallel to the beam.

Install the unit at a height where an object can be detected without fail.

At least 1 m (3.3 ft.)

This symbol indicates prohibition.  
This symbol indicates recommendation.

1-3 PARTS IDENTIFICATION

Cover

Main unit

Chassis

FUNCTION SETTING SECTION >>

<Transmitter>  
Monitor jack (+)  
Monitor jack (-)  
Alarm indicator  
Dip switch  
Power indicator

<Receiver>  
Dip switch

Accessories >>

3×6 self tapping for pole bracket: 4

4×20 self tapping for wall mounting (with rubber washer): 4

M4×30 screws for pole mounting (with rubber washer): 8

Beam blocking plate: 2  
(attached on the back of the cover)

U-brackets: 4

Pole brackets: 4

Banding bands: 4

Cut bush for wiring
2 INSTALLATION

2-1 SEPARATING

1 Remove the cover.

2 Remove the main unit from the chassis.

- Loosen the cover lock screw.
- Twist it lightly.
- Pull the upper part of main unit, and raise it to remove.
- Turn the optical unit 90 degrees and loosen the screws (both sides).

**Caution**
Do not place the main unit where it allows to incident direct sunlight to its optical lens during installation. Doing so may cause damage to the product.

2-2 WIRING

1 Preparing the cut bush

Cut the wiring grommet required according to the wire diameter. Use the lidded grommet for the wiring hole not to be used.
(I.D. : Int. diameter)

- I.D. 10mm (0.39 inch)
- I.D. 8mm (0.31 inch)
- I.D. 6mm (0.24 inch)
- I.D. 4mm (0.16 inch)
- I.D. 7mm (0.28 inch)
- I.D. 6mm (0.24 inch)
- I.D. 4mm (0.16 inch)

2 Threading the wire

1 Cut off the cut bush according to the cable size.
2 Pass the cable through the cut bush.
3 Tighten the cable with the banding band.
4 Cut the excess portion of the banding band.
5 Connect to the terminals

Refer to "TERMINAL" on Page 4 to make connections to the terminals and refer to "OPTICAL ALIGNMENT" on Page 8 to make alignment for the maximum level of light reception.

**Caution**
Do not exceed the voltage or current rating specified for any of the terminals during installation, doing so may cause fire or damage to the product.
2-4 WIRING DIAGRAM

1  1 Set
Connect the power supplies in parallel.

2  2 Sets in the line
Connect the power supply in parallel. Connect the units serially for a normally closed alarm output and in parallel for a normally open output (the figure below shows an example for a normally closed alarm output).

2-5 WIRING DISTANCE BETWEEN POWER SUPPLY AND DETECTOR

- Ensure that the wiring distance from the power supply is within the range shown in the table below.
- When using two or more units on one wire, the maximum length is obtained by dividing the wire length listed below by the number of units used.

<table>
<thead>
<tr>

</tr>
<tr>
<td>(AWG16)</td>
<td>9200m (30000ft)</td>
</tr>
</tbody>
</table>

Note>>
UL requires to be connected to a UL listed power supply capable of providing a nominal input of 12 VDC, (10.5 - 30 VDC) 45 mA and battery stand by time of 4 hours.
2-6 WALL MOUNTING

1 Open the wiring guide on the back of the chassis using pliers as shown.

2 Pull the waterproof packing (x2) marked as "①" at the center of the chassis.

3 Mount the chassis to the wall.

4 Put the waterproof packing back in place.

5 Fix the main unit.

   ① Insert the lower part, and then push the upper part onto the chassis.

   ② Turn the optical unit 90 degrees and tighten the screws (both sides).
2-7 POLE MOUNTING

< Installing one detector >

1. Using a screwdriver or similar tool, break the knockout position (x4) in the chassis as shown.

2. Fix the chassis on the pole.

3. Perform the wall mounting procedure of 4 to 5 on page 5.

Note>>
Push the middle part of the cover and hide this orange label completely when in operation.

Caution
Do not contact with the optical unit when mounting the cover. Otherwise malfunction may occur due to the shift of the optical axis, resulting in the need of readjustment.

Caution
If you accidentally open an unnecessary knockout, be sure to fill the knockout. Not doing so may result in waterproof failure and malfunction of the product.

Note>>
• When mounting the single set of detectors to the pole, use a pair of the inside knockouts. The knockout positions are marked “2” as shown.

Make function settings and optical alignment before mounting the cover.
< Installing two detectors in opposing directions >

1 Using a screwdriver or similar tool, break the knockout position (x4) in the chassis as shown.

2 Fix the chassis on the pole.

3 Perform the wall mounting procedure of 4 to 5 on page 5.

Note>>
- Choose a different pair of knockouts.
- Pairs of the knockout positions are marked "ᶄ" and "ᶅ".

2-8 MOUNTING IN THE BEAM TOWER

1 In accordance with the type of the main unit inside the beam tower, install the detector in the same way as wall mounting or pole mounting.

Make function settings and optical alignment before mounting the cover.

2-9 INSTALLATION EXAMPLE AT PARTICULAR CASE

1 Avoid installing the transmitter and receiver facing each other through the corner of the cover.

2 In doing this installation, the maximum detection range shall be half of the original detection range.
   (This is to compensate the attenuation of beam by the corner of the cover.)

ex) SL-200QN 60m/200ft. → 30m/100ft.
3 FUNCTION SETTING

3-1 BEAM INTERRUPTION ADJUSTMENT

Initial setting is at 50 msec for normal work. According to the speed of a supposed target you select one specific setting out of 4 steps. Set the beam interruption adjustment switches of the Receiver according to the speed of the human object to detect.

<table>
<thead>
<tr>
<th>Dip switch (Receiver)</th>
<th>ON</th>
<th>ON</th>
<th>ON</th>
<th>ON</th>
</tr>
</thead>
<tbody>
<tr>
<td>Running (50 msec)</td>
<td>1 2</td>
<td></td>

</tr>
<tr>
<td>Jogging (100 msec)</td>
<td>1 2</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Walking (250 msec)</td>
<td>1 2</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Slow movement (500 msec)</td>
<td>1 2</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Typical interruption time setting

4 OPTICAL ALIGNMENT

4-1 OPTICAL ALIGNMENT FOR UPPER AND LOWER BEAM

Optical alignment is an important adjustment to increase reliability. Be sure to take adjustment steps 1 through 5 described below to attain the maximum level of the output through the monitor jack.

1. Perform rough alignment of the horizontal angle.

   - Hold and move the lens to the left or the right.

   - Mount a beam blocking plate to the lower unit and then start optical alignment from the upper unit.
   - Beam blocking plate is attached on the back of the cover.
   - Put back the beam blocking plate to the cover after use.

   Note>>
   - View finder

2. Look into the view finder and perform fine alignment of the horizontal and vertical angles using the alignment dial.

   - From right side
   - From left side
   - Left eye
   - Right eye

   Note>>
   - How to look into the view finder
3 Make the settings of 1 to 4 to the lower as well.

Insert the voltmeter’s positive pin into the positive terminal of the monitor jack, and the negative pin into the negative terminal.

After the alignment using the viewfinder, make adjustment with the voltmeter for more accurate optical alignment. Set the voltmeter range to 5 to 10 VDC. After checking the receiving level of optical axis by using the alarm indicator, make sure to make fine alignment for both transmitter and receiver with voltmeter to achieve a monitor output level of "Excellent" or "Good".

4 Adjust the horizontal and vertical angles while checking the light receiving status by Alarm indicator LED on the pairing receiver.

Adjustment

| Level | Monitor jack output
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>0 V</td>
<td>2.0 V</td>
</tr>
<tr>
<td>2.0 V</td>
<td>3.5 V</td>
</tr>
<tr>
<td>3.5 V</td>
<td>5.0 V</td>
</tr>
</tbody>
</table>

Be sure to perform fine alignment to ensure the maximum output level through the monitor jack.

5 Make the settings of 1 to 4 to the lower as well.

5 OPERATION CHECK

Conduct a walk to check that the alarm indicator LED on the receiver turns ON as the walker interrupts the beam. Be sure to conduct a walk test (to block the infrared beam) at the following three points:

- In front of the transmitter
- In front of the receiver
- At the middle point between the transmitter and the receiver

The detector is installed properly when the alarm indicator LED turns ON in the tests at all three points.

Note>>
- Do not look at strong light sources such as sunlight through the view finder.
- Do not touch the lens during optical alignment.

Warning

Caution

Note>>
- Turn the small dial for horizontal alignment.
- Turn the large dial for vertical alignment.
- Clockwise: Upward
- Counterclockwise: Downward
The heat release effect makes the unit less prone to frost. HU-3 can be mounted to either upper or lower part of the unit.

Use a 24 V power supply to use HU-3.

**Mounting method**

1. Tear the wiring groove section of the label that is pasted on the chassis as shown below.

   ![Label Tearing Instructions](image)

   **NOTE>>**
   The label can be torn with a finger.

2. Insert HU-3 into the chassis.

   ![HU-3 Insertion Instructions](image)

   **NOTE>>**
   - Insert the tip of HU-3 into the hook of the chassis to mount HU-3.
   - Do not mount HU-3 with the face down.

3. Route the cable along the wiring groove and draw the cable through the cutbush.

4. When connecting the lead wires to the wiring, make the connection using the included connector or soldering. Insert the wires into the connector and tighten the connections with pliers.

   ![Connector Insertion Instructions](image)

   **NOTE>>**
   Ensure that the wiring distance from the power supply is within the range shown in the table on the right. When using 2 or more units on 1 wire, the maximum wiring distance is obtained by dividing the wire distance by the number of unit used.

<table>
<thead>
<tr>
<th>Wire size (AWG)</th>

<td>1.31 mm² (AWG16)</td>
<td>500 m (1700 ft.)</td>
</tr>
<tr>
<td>2.09 mm² (AWG14)</td>
<td>800 m (2600 ft.)</td>
</tr>
</tbody>
</table>

**Caution**
Do not wire HU-3 to the main unit. Doing so may result in malfunction.

**NOTE**

These units are designed to detect an intruder and activate an alarm control panel. Being only a part of a complete system, we cannot accept responsibility for any damages or other consequences resulting from an intrusion. These products conform to the EMC Directive 2004/108/EC.
**Anti Bird Cap ABC-4**
Prevent birds and small animals from the detector to reduce the false alarm.
Prevent streaming rain and snow from the front of the detector to keep the sensitivity.

**Back Cover BC-4**
Conceal the back side of pole mounted detector.

**Conduit Bracket CBR-4**
This allows for conduit wiring.

**Pole Side Cover PSC-4**
Conceal the gap of pole mounted detectors back to back.

**Beam Alignment Unit BAU-4**
Adjust optical axis automatically. (Receiver only)

**Heater Unit HU-3**

Prevent birds and small animals from the detector to reduce the false alarm.

Prevent streaming rain and snow from the front of the detector to keep the sensitivity.

Conceal the back side of pole mounted detector.

This allows for conduit wiring.

Conceal the gap of pole mounted detectors back to back.

Adjust optical axis automatically. (Receiver only)

Prevent birds and small animals from the detector to reduce the false alarm.

Prevent streaming rain and snow from the front of the detector to keep the sensitivity.

Conceal the back side of pole mounted detector.

This allows for conduit wiring.

Conceal the gap of pole mounted detectors back to back.

Adjust optical axis automatically. (Receiver only)
