HX-80NRAM Battery operated with 2 PIRs and anti-masking

- Battery operated
- Battery saving logic
- Compatible with most wireless transmitter
- Long distance detection area (24.0 m)
- Flexible detection area setting with plates and flaps
- Unique pyro element
- Intelligent AND logic
- Dual signal processing logic
- Vegetation sway analysis logic
- Digital anti-masking
## INSTALLATION PRECAUTIONS

### 1-1 BEFORE INSTALLATION

**⚠️ Warning**  
Failure to follow the instructions provided with this indication and improper handling may cause death or serious injury.

**⚠️ Caution**  
Failure to follow the instructions provided with this indication and improper handling may cause injury and/or property damage.

The check mark indicates recommendation.  
The nix sign indicates prohibition.

<table>
<thead>
<tr>

<th>⚠️ Warning</th>
<th>⚠️ Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>🚫 Repair or modify</td>
<td>🚫 Keep away from water</td>
<td>🚫 Mount securely</td>
</tr>
<tr>
<td>Do not repair or modify product</td>
<td>Keep product away from water</td>
<td>Mount the unit securely</td>
</tr>
</tbody>
</table>

**Mounting height**

- **2.5 m – 3.0 m**  
  (8'2" – 9'10")

**Keep the detector parallel to the ground.**

- **Parallel**

**Tilt**

Consider the direction a person is approaching from, as well as the detection area.

- **Sunlight and reflection**
- **Heat source**
- **Objects moving in the wind**

Install the detector in a place where it is free from false alarm factors. For example:

Accessories:
- Battery leads
- Velcro tapes
- Dummy battery
- Alarm cable

(Transmitter and battery are not included.)

### 1-3 KNOCKOUTS

#### Main unit

- Wiring knockout
- Wiring sponge pad
- (4 × 20 mm)
- (4 × 20 mm)
- Do not touch
- PIR1
- PIR2

#### Bracket

- Wiring hole
- (Off-the-shelf) Universal magnet switch install position
- Up-Down lock screw
2 DETECTION AREA

2-1 OUTLINE OF DETECTION AREA

Plate 1

Upper flap

Plate 2

Flap fix position indicator

Lower flap

Plate fix position indicator
DETECTION AREA (factory default)

Caution>>
Adjust 1 click (1.25° upward) for 3.0 m (9'10") height installation. (Refer to 5-2)

Caution>>
Adjust 2 clicks (2.5° upward) for 2.5 m (8'2") height installation. (Refer to 5-2)
2-2 HOW TO REDUCE THE LONG RANGE DETECTION AREA

To adjust the LONG range of detection, set the upper and lower flaps as follows:

1. Pull out the flap.

   **Note>>**
   
   If the lower flap is located at the factory default position, slide it out with your thumb.

2. Move the flap to the position that corresponds with the desired detection distance.

3. Push the flap until it clicks into position.
**PIR long range detection area reduction**

The detection distance in the following table can be limited by combining the positions of the flap. Use the following table to determine the positions of the upper and lower flaps that set the required max. detection distance.

**NOTES:**
1. The distance may vary due to environmental conditions.
2. Always walk test the detector to confirm the detection distance.

<table>
<thead>
<tr>
<th>Lower</th>
<th>Upper</th>
<th>Factory default</th>
<th>b</th>
<th>d</th>
</tr>
</thead>
<tbody>
<tr>
<td>Factory default</td>
<td>24.0 m (80')</td>

</tr>
<tr>
<td>c</td>
<td>N.A.</td>
<td>10.0 m (32°10')</td>
<td>6.5 m (22')</td>
<td></td>
</tr>
</tbody>
</table>

**NOTE:** Use only the following combinations for the flap settings.

1. Upper position: a, Lower position: Factory default
2. Upper position: a, Lower position: b
3. Upper position: c, Lower position: b
4. Upper position: c, Lower position: d
2-3 HOW TO DEACTIVATE THE SHORT RANGE DETECTION AREA

To adjust the SHORT range of detection, set the upper and lower plates follows:

- Plate 1
- Plate 2
- Plate fix position indicator

* Plate 1 and 2 are identical.

1. Remove the plate.
2. Insert the plate into the position determined by the required masking distance until it clicks.
3. If any plate is not used, place it in the storage position.

**Note>>**
Be careful not to lose the plates.
PIR short range detection area deactivation

Use the following table to determine the positions of the plates that set the required masked area.

<table>
<thead>
<tr>
<th>Lower</th>
<th>Upper</th>
<th>j</th>
<th>h</th>
</tr>
</thead>
<tbody>
<tr>
<td>Not used</td>

<td>3</td>
</tr>
<tr>
<td>g</td>
<td>N.A.</td>
<td>N.A.</td>
<td>4</td>
</tr>
</tbody>
</table>

NOTE: Use only the following combinations for the plate settings.

- 9 -
To use the HX-80N_RAM, first prepare transmitters and batteries. First check the following flowchart.

**3 TRANSMITTER PREPARATION**

Transmitters can be installed in one of two positions according to their size as follows.

- **Case 1)** 122 × 50 × 33 mm
- **Case 2)** 80 × 50 × 22 mm

---

**3 PREPARATIONS**

To use the HX-80N_RAM, first prepare transmitters and batteries. First check the following flowchart.

- **Transmitter size**
  - Is it possible to accommodate the transmitter in the space between Base and Main Unit? (Refer to 3-1)?
  - Yes: Go to **Battery type**
  - No: Change the transmitter.

- **Battery type**
  - Is the battery in the transmitter CR123, CR2, or 1/2AA?
  - Yes: Go to **Battery preparation**
  - No: It is not possible to share the batteries of HX-80N_RAM. Prepare the required batteries for HX-80N_RAM.

- **Battery preparation**
  - It is possible to share the batteries of HX-80N_RAM. Prepare the required batteries which are the same type as used in the transmitter.
  - It is not possible to share the batteries of HX-80N_RAM. Prepare the required batteries for HX-80N_RAM.

- **Reference**
  - Refer to "Battery Sharing" in 3-2.
  - Refer to "Non Battery Sharing" in 3-2.
3-2 BATTERY PREPARATION

-Battery Sharing
(Refer to 4-1.)

Power supplied is available from battery box to power HX-80N RAM and the transmitter.

Type CR123A CR2 1/2AA 1/2AA(*1)
Voltage 3.0VDC 3.0VDC 3.6VDC 7.2VDC(*1)
Number of cells to use 3 cells 3 cells 3 cells 6 cells(*1)

*1: 3.6 VDC 1/2 AA battery in series.

Note that battery type should be the same as that used for the transmitter.

-Non Battery Sharing
(Refer to 4-1.)

Separate batteries for HX-80N RAM and the transmitter.

Type CR123A
Voltage 3.0VDC
Number of cells to use 3 cells

If CR123A battery cells are unavailable, three CR2 battery cells (3.0 VDC) can be substituted. Do not use 1/2AA batteries.

* Do not use the attached dummy batteries or battery lead.
4 INSTALLATION (BATTERY AND TRANSMITTER)

-Installation procedure

DETERMINING THE DETECTION LENGTH

INSTALLING THE BATTERY
- Battery Sharing
- Non Battery Sharing

INSTALLING THE TRANSMITTER AND BATTERY BOX

4-1 INSTALLING THE BATTERY

-Battery Sharing

⚠️ Warning

Do not use batteries of different capacities (i.e., mixing new and used batteries) or of different manufacturers and/or types together. Not observing the above may result in an explosion, leakage of electrolyte, emission of toxic gases or other outcomes that may be harmful to people and property.

1. Remove the battery box from the main unit.
   Open the claws (at 2 places).

2. Remove the battery box cover.
   Lift and remove
   Open the claws (at 2 places) slightly.
3 Mount batteries and place cover into correct position using indicator on side of battery box. Hook the cover firmly by the claws on the right and left sides.

4 Open the transmitter cover and remove the battery.

5 Place the battery lead (included in the set) and a dummy battery in the battery case of transmitter.

6 Connect the alarm cable to the transmitter and close the cover.

Caution:
To avoid short circuit, do not connect ends of red and black wires together.
- Non Battery Sharing

Arrange 3 cells each of CR-123A (recommended) or CR2.

**Warning**

Do not use batteries of different capacities (i.e., mixing new and used batteries) or of different manufacturers and/or types together. Not observing the above may result in an explosion, leakage of electrolyte, emission of toxic gases or other outcomes that may be harmful to people and property.

1. Remove the battery box from the main unit. Open the claws (at 2 places).
2. Remove the battery box cover. Lift and remove Open the claws (at 2 places) slightly.
3. After installing the batteries, check the guide on the side and install the cover. Hook the cover firmly by the claws on the right and left sides.
4. Connect the alarm cable to the transmitter and close the cover. Put the alarm wire outside through the wiring hole.

**Caution>>**

To avoid short circuit, do not connect ends of red and black wires together.
4-2 INSTALLING THE TRANSMITTER AND BATTERY BOX

1. Using Velcro tape (included in box), install transmitter to main unit.

   ![Example of Case 1](Refer to 3-1.)

   ![Example of Case 2](Refer to 3-1.)

   Velcro tape

2. Connect the alarm cable to the terminal block of the main unit.

3. Install the battery box into the main unit and connect the necessary wires to the terminal block. (Refer to 5-4 "WIRING").

   ![Example of Case 1]
   ![Example of Case 2]

**Caution>>**

Install battery leads and alarm cable through the grooves as shown in diagram. Cut off excess portion of wiring to necessary length. Hanging wires can be caught by base.
5 INSTALLATION (BRACKET AND MAIN UNIT)

Use the bracket for normal installation. The unit may be installed directly on the wall, without the bracket, only if the following three conditions are met:
• The mounting height is less than 3 m (9'10").
• Horizontal adjustment is not necessary.
• The ground must be level.

5-1 INSTALLING WITH BRACKET

Using the bracket makes it possible to adjust the unit horizontally by ±90°.
In cases where the ground is uneven and therefore not parallel with the base of the unit, it is possible to adjust the unit vertically by ±20°.

Caution>>
Do not change the detection length with bracket.
Use the flaps and plates to adjust the detection length.

1 Remove the Up-Down lock screw.

2 Push the shaft cover clip straightly to remove the shaft cover.

Shaft cover clip
Shaft cover
Push with suitable tool:
e.g. small screwdriver
3. Loosen the adjustment screw two turns.

4. Determine the horizontal direction (left or right) of the detector before installing the bracket on the wall.

5. Open the wiring knockout and Up-Down lock screw knockout for the bracket.

6. Pass wire through base knockout and install base to bracket.

7. Tighten the adjustment screw clockwise.

8. Wire to the terminal and install the main unit and lens on the base.

9. Complete the 5-2 “ADJUSTING THE VERTICAL ANGLE”.

10. Remove the cover and the main unit to tighten the Up-Down lock screw, and install the main unit and cover on the base again.

11. Install shaft cover into place.
5-2 ADJUSTING THE VERTICAL ANGLE

For best performance, install detector parallel to the ground. Decide the detection length. To change the detection length, adjust the flap and plate positions. Refer to the 2-2, 2-3 for the details.

Perform walk test to ensure detector is parallel to the ground.

- If the detection length is shorter than that which was setup (refer to page 7), change the detector angle upwards.
- If the detection length is longer than that which was setup (refer to page 7), change the detector angle downwards.

Caution>>

• If the base of the unit is already parallel to the ground, do not change the detection length by tilting the main unit up or down. Refer to 5-1 for the details.

Example (the ground is level)

0° is the origine.

Adjust 2 clicks (2.5° upward) for 2.5 m (8’2”) height installation.

Adjust 1 click (1.25° upward) for 3.0 m (9’10”) height installation.

5-3 INSTALLING WITHOUT BRACKET

1 Fasten the base to the wall.

2 Fit the main unit to the base.
5-4 WIRING

*1: TAMPER terminals to be connected to a 24 hour supervisory loop.

-Battery Sharing

-Non Battery Sharing

* Use a transmitter with 2 inputs and connect one input to the Alarm wiring and the other to the Trouble wiring of the HX-80.

NOTE: If the transmitter has a "low battery input" connect it to the Trouble wiring.

* Use 2 small transmitter units and connect one unit to the alarm wiring and the other to the trouble wiring (the size of such transmitters should be small enough to be accommodated in the HX-80NRAM internal spaces (A/B)).
5-5 WALL TAMPER (OPTION)

Commercial magnet switch may be mounted as a wall tamper. Magnet switch installation space is provided on the back of the main unit and the bracket. Maximum size of an applicable magnet switch: D 9 mm (0.35") × W 40 mm (1.57") × H 9 mm (0.35") Magnet switch is not included.

-WIRING DIAGRAM-

Main unit

Transmitter

Magnet switch

HX-80NRAM Main unit

Bracket

Wiring Hole

Magnet switch (Bracket side) installation position

Magnet switch (Wall side) installation position
-Installation

1. Install the magnet switch (wall side) to the wall. To determine the installation position, use the "Installation position template" provided on the inside cover of the product package.

2. Open the wiring knockout with suitable tool e.g. screwdriver.

3. Install the other portion of the magnet switch to the back of the main unit or the bracket. Pull the wiring through the knockouts.

4. Install bracket and main unit to the walls surface.

5. Connect the magnet switch wiring to the tamper terminal of the main unit and the transmitter terminal.
6 WALK TEST

1. Set the DIP switch 1 (WALK TEST MODE) to "ON (TEST)".

\[\text{Note}>>\]
- The switch is set to "ON (TEST)" by factory default.

2. Check that the detector detects an object in the intended detection area. The installation has been successful if the LED lights for two seconds after a person walks into the detection area.

\[\text{Note}>>\]
For the walk test, move more than 1.0 m (3'3") away from the detector.

3. If the LED does not need to be turned on at all times, set the DIP switch 1 (WALK TEST MODE) to "OFF (NORM.)".

7 SETTING

### -WALK TEST MODE

<table>
<thead>
<tr>
<th>POSITION</th>
<th>FUNCTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>TEST</td>
<td>- LED will lights when someone detected regardless DIP-SW 6.</td>
</tr>
<tr>
<td>(Factory default)</td>
<td>(Lights up irrespective of the LED ON/OFF (DIP-SW 6, refer to page 24) setting)</td>
</tr>
<tr>
<td></td>
<td>- Alarm will be generated when someone detected regardless DIP-SW 2.</td>
</tr>
<tr>
<td>NORM.</td>
<td>- Normal operation. (Battery saving mode.)</td>
</tr>
<tr>
<td></td>
<td>- LED is off. (When LED ON/OFF is OFF.)</td>
</tr>
</tbody>
</table>

**Caution>>**

After completing a walk test, always set the unit to NORM. position for operation. Using the unit in TEST mode will shorten the battery life.

### -BATTERY SAVING TIMER

<table>
<thead>
<tr>
<th>POSITION</th>
<th>FUNCTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>120s</td>
<td>120 sec.</td>
</tr>
<tr>
<td>(Factory default)</td>
<td></td>
</tr>

<tbody>
<tr>
<td>STD</td>
<td>IMMUNITY logic is not activated.</td>
</tr>
<tr>
<td>(Factory default)</td>
<td></td>
</tr>
<tr>
<td>IMMUNITY</td>
<td>IMMUNITY logic is activated. Use this under harsh environment (e.g. vegetation sway).</td>
</tr>
</tbody>
</table>

### -TROUBLE OUTPUT TYPE

Select the contact point output form with the TROUBLE OUTPUT TERMINAL.

<table>
<thead>
<tr>
<th>POSITION</th>
<th>FUNCTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>N.C.</td>
<td>N.C. signal is output to the TROUBLE OUTPUT TERMINAL.</td>
</tr>
<tr>
<td>(Factory default)</td>
<td></td>
</tr>
<tr>
<td>N.O.</td>
<td>N.O. signal is output to the TROUBLE OUTPUT TERMINAL.</td>
</tr>
</tbody>
</table>
Trouble signal output >>
Trouble signal at regular intervals is output after trouble condition continues for a certain period.

• ANTI MASKING OUTPUT
When an object is placed close to the lens surface, for a period of more than 180 seconds, the IR Anti-Masking circuit will activate and generate a trouble signal. Anti-Masking output will be automatically reset within about one minute after a masking object is removed.

• LOW BATTERY OUTPUT (when the LOW BATTERY OUTPUT (DIP switch 5) is ON)
When the battery capacity becomes low, the unit automatically outputs fixed time transmission to call attention. When LOW BATTERY signal is output, Anti-Masking function will be canceled in order to extend the battery life. When LOW BATTERY signal is output, replace all the batteries with new ones.

⚠️Warning
Do not use batteries of different capacities (i.e.: mixing new and used batteries) or of different manufacturers and/or types together. Not observing the above may result in an explosion, leakage of electrolyte, emission of toxic gases or other outcomes that may be harmful to people and property.

-LOW BATTERY TERMINAL

<table>
<thead>
