Why get smart meters?

They can save you money

As you'll be able to see just how much the energy you're using costs in pounds and pence, it'll help you work out which appliances use the most energy, so you can change your behaviour to lower your bills.

It's free to upgrade

They're part of the government's plans to upgrade our ageing energy system and to help you understand the cost of the energy you use in near real-time.

They're accurate

They've been rigorously tested to make sure they deliver up to date, accurate and reliable readings so you only pay for the energy you use.

There's loads more reasons overleaf →

A few more reasons...

You won't need an internet connection

Smart meters use their own secure, wireless network using radio waves, just like mobile phones. So the good news is you can still have smart meters even if you don't use the internet in your home.

Smart meters don't hold any personal data

Smart meters are similar to traditional meters, in that they only record the amount of energy you use through meter readings, meaning none of your personal details are stored. And no third parties will be able to access your energy usage data without your permission.

They won't stop you switching energy supplier

Having smart meters won't stop you from being able to change your energy supplier (although we hope you don't). Your new supplier will tell you if your smart meter benefits will change if you switch, so you can decide whether you want to move.

The industry is working together to make sure your smart meters will work with full smart functionality in the future if you switch.

Your data is secure

We take data security very seriously and there are strict security requirements protecting smart meter data that all suppliers must work to. Smart meters have been designed with top cyber security experts so you can rest easy knowing your meter readings are safe from cyber attacks.

Smart meters are safe

Smart meters have been rigorously safety tested and exceed every UK and EU safety standard. Public Health England has said that the radio waves produced by smart meters doesn't pose a risk to health. In fact, they've found that exposure to radio waves from smart meters is much lower than the exposure from wifi and mobile phones that we use in our homes today.

Call us on **0333 777 0 777** to upgrade to smart meters today.
