

## Stimuli:

### Level 1 visual perspective-taking task

---

The material uploaded here relate to the methods used in the following paper:

Samson, D., Apperly, I. A., Braithwaite, J. J., Andrews, B. J., & Bodley Scott, S. E. (2010). Seeing it their way: Evidence for rapid and involuntary computation of what other people see. *Journal of Experimental Psychology. Human Perception and Performance*, 36(5), 1255–66.  
doi:10.1037/a0018729

### Content of material

We provide here the list of trials and timing for the avatar condition in an excel sheet.

### Additional information

- 1) Only "yes" responses (matching responses) should be taken into account in the analyses because otherwise the consistency effect will be overestimated (this is explained in the JEP:HPP paper).
- 2) We first used a gender-congruent avatar with the gender of participants but the effects are replicated even when there is no gender congruency.

### Conditions of use

No commercial use is allowed.

Should you use this material for your own research, please cite (1) the original paper (see reference above) and (2) the Figshare DOI.
