

# It's All About the Details

The T1K / T1020 is designed to be compact, streamlined, and easy to use. FLIR's engineers focused on advancing the thermal and optics technology without adding bulk to the overall T-Series design. The result is a thermal camera that works with you. The viewfinder plus the 120° rotating optical block allow you to point the T1K / T1020 in multiple directions while maintaining a comfortable position. The glare-reducing eyecup on the high resolution viewfinder improves scanning in daylight conditions. And, the joystick and programmable buttons let you control the camera with a finger or thumb – no need to change your grip.
