

Meadowdale Academy

ADMINISTRATION OF MEDICATION AND ASTHMA POLICY

Safeguarding Statement

At Meadowdale Academy we respect and value all children and are committed to providing a caring, friendly and safe environment for all our pupils so they can learn, in a relaxed and secure atmosphere. We believe every pupil should be able to participate in all academy activities in an enjoyable and safe environment and be protected from harm. This is the responsibility of every adult employed by, or invited to deliver services at Meadowdale Academy. We recognise our responsibility to safeguard all who access the academy and promote the welfare of all our pupils by protecting them from physical, sexual and emotional abuse, neglect and bullying.

Contents:

- 1. Guidance**
- 2. Aims**
- 3. Pupils with inhalers**
- 4. Obtaining and Recording Information**
- 5. Access to Medicines and Inhalers**
- 6. Sports and Exercise**
- 7. Animals**
- 8. Returning from Absence due to Illness**
- 9. Long Term Medical Problems**
- 10. Cleaning Regimes**

1. Guidance on the administration of medication (general):

- Non prescription medicines are not allowed in the academy;
- If medicine is prescribed 3 times daily, parents are advised that administration should be made before attending the academy, after attendance at the academy and at bedtime;
- If medicine has to be administered in the academy then parents/ guardians are requested to:
 - supply the exact dose in a syringe
or
 - the correct number of tablets/capsules
or
 - make arrangements to come to the academy to administer the necessary dosage.

All parents must give written permission for the medicine to be on site and state the exact dosage and timing of said medicine by completing the medication care plan. This will be formally recorded with parents/guardians and academy representative signatures. No medication will be given without this care plan in place.

2. Aims

Where deemed appropriate the academy will seek medical advice and guidance on the best procedures to support pupils to enable them to take part as fully and safely as is possible in all academy activities.

We expect parents/ guardians to advise the academy of their child's specific medical needs. Details will be recorded and held on the academy's computer system. They will also be attached to registers/ teacher information to alert the teacher (and any temporary supply staff) to such needs – this includes asthma and anaphylaxis.

3. Pupils with inhalers

Pupils will be responsible for their own inhalers so that they always have immediate access to them. Where agreed in the plan of care, inhalers will be taken out of the academy for off-site activities. Parents/ guardians will be informed of the arrangements by letter. Information for each pupil will be updated as appropriate and checked at the beginning of each academic year. It is the responsibility of parents/guardians to ensure that any medications (including inhalers and epipens) stored at or brought into the academy, have not reached their expiry date.

4. Obtaining and Recording Accurate Information

Meadowdale Academy will ask all parents/ guardians of new entrants whether their child has any medical conditions and / or complex health needs. This information will be stored on the academy's computer system. If appropriate this will be noted on a special educational needs record / Individual Education Plan (IEP) and will be updated as necessary. The records will show:

- Personal details;
- Hospital reference (if applicable);
- Any treatment needed regularly;
- Relief treatment if required;
- An agreed plan of care;
- Details of any other Multi-Agencies involved in supporting the pupil.

5. Access to Medicines and Inhalers

Where medicines/inhalers are necessary, (i.e. prescribed by a Doctor), pupils will need free, permanent access to their location. Inhalers and epipens will remain with the pupil whereas all other medicines will be stored in a designated central location e.g. First Aid station, the academy office. All inhalers, capsules and epipens must be labelled with the pupil's name and year group. There are two main types of inhalers:

- **Relievers** – clearly relieve the symptoms of asthma – common examples are called 'Ventolin' and Bricanyl' and are usually BLUE in colour.
- **Anti-histamine** – relieve symptoms of allergies. If prescription is 1 per day – school will only administer in cases of emergency. **If your child needs anti-histamine to relieve hay fever, please administer before your child leaves for school in the mornings.**
- **Preventers** - relieve inflammation and are clearly designed to prevent the onset of asthma – common preventers are 'Beclafort', 'Becatide', and 'Intal' and are usually BROWN in colour.

N.B. Staff do not administer medicines to pupils unless specifically agreed and relevant forms are completed.

6. Sports & Exercise

Staff should be aware of those pupils who may become wheezy during exercise and who may need to use their inhaler before taking part. Breathlessness during an activity will result in the pupil withdrawing from the activity for that lesson and being monitored by academy staff trained in first aid.

For outside activities staff should also be aware of pupils who have been prescribed Epipens for severe reactions to bee/wasp stings.

7. Animals

Staff need to be aware that some animals can cause a sudden and severe reaction. Pupils, known to react in this way, should not approach, handle or care for the animals. To avoid this, pets should not be kept in general areas but in special designated rooms where pupils and staff do not normally work. This also applies to any incubator which is used to hatch chicks. Appropriate risk assessments should be made and agreed with parents / guardians before any educational visits to sites where animals are present.

8. Returning From Absence Due to Illness

We do not encourage pupils to miss lessons or to stay indoors during break and lunchtimes, so before a pupil returns to the academy after an illness, parents/ guardians should ensure that he/she can cope with the whole academy day.

9. Long-term Medical Problems

Where there are pupils suffering from conditions which might require emergency treatment at any time, such as asthma, epilepsy, anaphylaxis or diabetes, all subject teachers are made aware of the condition, the treatment and any other relevant information. Where a condition is known to need specific intervention, e.g. administering rectal diazepam for epilepsy, the academy will seek advice and training from a suitably qualified professional. Parents/ guardians are responsible for notifying the academy of any known conditions or changes to medication / care plans. The academy will ensure this information is updated.

10. Cleaning Regimes

Excessive dust from 'walked in' dirt (clay particles) contributes to respiratory problems and should be removed by the academy's regime of vacuuming on a regular basis rather than by normal sweeping. Filters on warm air central heating systems will be checked and cleaned regularly in particularly dusty environments. Such filters will always be cleaned before the heating is switched on for the autumn term.
