

Mount Street Primary News

5th May

Dear Parents,

We have a few events to tell you about. On **Monday 8th May** Year 5 children have been invited to Lipson Co-operative Academy to audition for "Paws and Claws."

The next day, **9th May**, our Football Team will be competing in the Knockout Cup at Hooe Primary. The tournament starts at 3:30 if you would like to show your support.

Two date reminders...

We have moved **Sports Day** to **9th June** as it clashed with SATS week.

Once again, the day before, **8th June**, we are closed as we are a Polling Station for the General Election.

We mentioned Mrs Lake's maternity leave last week. Her last day will be next Wednesday, 10th May, and we're sure there will soon be good news to follow!

Can you please make sure Dinner Money is paid promptly and don't forget, it is now £2.10 for a School Lunch.

Finally, if you need to drive to school, please allow time to find a parking space. Do not use the school car parks. They are usually full and staff are arriving and leaving throughout the day the car parks are for staff use.

Some of this week's fantastic work

Filip's (Y1) Vegetable Garden

Daria's Garden

Tuesday 18th April 2017

do: Can I explain the life-cycle of an amphibian? *amphibian*

1.) First, of all the frogs get born in a little jelly circle and when the frogs are born they are in really big groupies. Next they would grow bigger inside the eggs. Eventually when they are fully grown inside the eggs they eat the jelly and are free. ✓

2.) Next after it eats the jelly they become tadpoles and gently grow hands but not fully and also grow a tiny tail and it looks like a small spoon when you can't see it's eyes. ✓

3.) After they become a bit bigger and when they grow their tail grows too but they still aren't grown properly and aren't proper frogs but their hands start be seen. ✓

4.) At this stage they have fully grown hands and legs and when they get bigger they colour green gets lighter but still looks a bit like a spoon and gets gills to breath because they need to breathe. ✓

5.) Now it is called a frog and it's tail grows small and it shrinks but it's legs grow bigger to help the frog swim and kick it's legs and swim. ✓

6.) Finally, the frog is an adult and is fully grown and get bigger and along the stage they make babies and carry's on and on for the frogs life-cycle. ✓

Excellent detail!

Golden Book!
