

Science Project 2- this term our Science topic will be 'Greatly Green Growers.'

The Greatly Green Growers need your help! They are a keen gardening group from the village of Greatly Green who have been challenged to a growing competition by their neighbouring village (and great rivals), Croppingwell. If they are to win the competition, the Greatly Green Growers will need to grow the tallest sunflowers, the heaviest marrows and the longest runner beans - but how can they do it? Your task is to discover through scientific research, what plants need to grow as strong and healthy as possible.

A home-school challenge for the children would be to create a project around this. Children could research and then create something, maybe an E-book, an informative poster or their own hand made Non-Fiction book. Other ideas include, setting up some investigations of their own. However, please do not worry if you do not have the resources for this, simply talking to your child about this topic will be beneficial.

Use the key questions below to help you find out about 'Greatly Green Growers'.

- What do plants need to grow?
- Could you set up a plant investigation of your own?
- What would you record?
- What would you observe?
- What would you measure?
- What are the parts of a plant?
- How is water transported in plants?

Have fun and enjoy! Mrs Turnbull
