

METAMORPHOSIS

Metamorphosis is a process some animals go through to become adults. It is a series of physical changes. Metamorphosis is especially common in insects. Genes and chemicals called hormones control the process.

Below is the life cycle of a butterfly and a dragonfly. These insects use metamorphosis to change. Describe the similarities and differences between the two life cycles.

Your Task

Complete the table to show the similarities and differences of the two cycles. Complete the sheet or write it in your jotter.

STAGE OF CYCLE	SIMILARITIES	DIFFERENCES
EGG STAGE		
LARVA STAGE		
CHRYSA LIS STAGE		
ADULT STAGE
