

Over the last two weeks, Year 6 have been engaging in lots of activities inside and outside of the classroom.

In Maths we have continued with our subject of fractions, securing and building on the knowledge we have already learnt. In recent days we have focused on using the four operations (add, subtract, multiply and divide) with fractions. Furthermore, we have looked at the process of converting mixed fractions to improper and vice versa before finally looking at how to find fractions of amounts.

In English, our portal stories have come to a close and we have now moved onto writing a non-chronological report. For this we have taken our learning from science and created our own animals whilst considering what surroundings they may have

adapted to, their appearance and what they like to eat. This has also provided us with the opportunities to promote various skills from our analytical abilities to creative writing and artistic skills to performance. In addition, SPaG over recent weeks has helped to develop our creative writing skills as we've been working on building our sentences from simple to complex and seen how relative clauses can help our work to include extra information.

In Science, after concluding our evolution topic we have now moved onto electricity and circuits. During our first lessons, we have focused our attention on the universal circuit symbols used throughout the scientific world. We had great fun practising creating circuits using ourselves before drawing them.

We have also continued with our theme of crime and punishment, where the learners have completed their diary entries of Thomas Wolsey. We have since moved on from the Tudors and started to focus on the Georgian period learning about Dick Turpin and Highwaymen. With this new information we have learnt we will be creating character descriptions of Dick Turpin.

Finally, outside of school, we very much enjoyed our visit to Crypt to watch their showcase of Grease. It was great to see what can be created and are all looking forward to putting on our own school production at the end of the school year.

We also loved creating a class Pudsey head with pennies for CIN.

Over the next 2 weeks we will be moving on to coordinates and geometry in Maths whilst also completing some tests to see how far we have progressed so far. We are continuing to get involved in Go Noodle in the classroom and will be putting all our skills we have learnt

in Netball in action when playing a game. We also will be evaluating our recent art work on PopArt before creating Christmas decorations.
