

It has been nice to get back into routine over the last 2 weeks in Year 6, as we have resumed our normal lessons following the Residential visit. We really are beginning to show that we are Year 6 with all the fantastic things we have been learning!

In maths, we have been exploring multiplication and division, testing our knowledge of long multiplication especially.

Year 6 have worked hard and persevered through these complex lessons.

In English, we have begun to write a portal story. This has been an exciting stimulus and we have already seen some very exciting ideas. It has been wonderful to see everyone's creative juices flowing as we use our imaginations to show all the different places that a portal could take us. We continue to study evolution in Science, and have been outside to make notes on the different ways that animals in the UK have had to adapt to their environment – there are many hazards out there, old and new.

In Spanish, we are focusing on classroom commands and classroom objects. We have all participated in a game of Simon Says in Spanish. Every child was contributing wonderfully by the end of the lesson. Some of the children even took on the responsibility of being Simon. ¡ Fantastica !

We have been taking an in-depth look into the Roman justice system and are currently preparing arguments to plead against crimes committed in the Roman times. We have all been interested in the multiple similarities between the Roman system and our own.

Over the next two weeks, we will be moving through long division in maths, which will be a very fulfilling challenge for everyone. We will also begin to identify classroom objects in Spanish. It will not be long before there is Spanish spoken in the classroom every day. We will continue to study evolution in Science, this time looking into inherited traits.
