<p>Count up to 100 in 1s from a given number.</p> <p>Read numbers up to 100 in numerals.</p> <p>Count up in 2s, 5s and 10s from 0.</p> <p>Identify one more and one less than any number up to 20.</p> <p>Accurately estimate a sets of objects up 20 and use more than, less than to compare with another number.</p> <p>Read numbers up to 20 in numerals.</p> <p>Recognise the function of the – and + symbols.</p> <p>Recall number bonds to 10 and use these in a range of real life contexts and role play.</p> <p>Add and subtract single digit numbers in a range of real life situations using concrete objects.</p> <p>Double numbers to 10 using objects, recognising that you add the same number twice.</p> <p>Use doubling in a range of real life contexts.</p>		<p><u>Count to and across 100, forwards and backwards, beginning with 0 or 1, or from any given number.</u></p> <p><u>Count, read and write numbers to 100</u> in numerals with correct orientation.</p> <p><u>Count in multiples of twos, fives and tens</u> (up and back). <u>Given a number, identify one more and one less.</u></p> <p>Identify and represent numbers using objects. Identify and represent numbers using pictorial representations including the number line.</p> <p>Use the language of: equal to, more than, less than (fewer), most, least.</p> <p>Read and write numbers from 1 to 20 in numerals and words and spelling them correctly.</p> <p>Read, write and interpret mathematical statements involving addition (+), subtraction (–) and equals (=) signs.</p> <p><u>Represent and use number bonds and related subtraction facts within 20.</u></p>			<p>Use numerals to explain why counting across 100 is tricky.</p> <p>Identify multiples of 2s, 5s and 10s in a set of numbers and reason their thinking.</p> <p>Identify 2 and 5 more/ less than a given number mentally and explain their approach.</p> <p>Reason how estimating can help when problem solving.</p> <p>Justify their ordering of numbers up to 100 on an empty number line.</p> <p>Compose oral maths stories around given number sentences.</p> <p>Know that re-ordering numbers in a number sentence ‘may’ affect the answer.</p> <p>Explain links between addition and subtraction facts up to 20. Use empty number lines to solve addition and subtraction calculations.</p> <p>Create their own missing number problems, explain how they tested that their solution is correct.</p> <p>Explain their solutions to addition and subtraction problems which involve two 2-digit numbers up to 20 , but where the answer is over 20 (e.g. 12+17)</p>	

Know that half has two equal parts and know that you can find half of a quantity by sharing into 2 groups.

Add and subtract one-digit and two-digit numbers, including zero.

Solve one-step problems that involve addition and subtraction, using concrete objects and pictorial representations, and missing number problems such as  $7 = \square - 9$ .

Solve simple addition and subtractions questions mentally as well as writing them down.

Add and subtract 3 1-digit numbers when using objects, number-lines and pictures.

Show that adding two numbers can be done in any order but subtraction cannot.

Understand the concept of sharing equally using concrete objects and pictorial representations, for example sharing 12 apples equally among 3 children.

Solve one-step problems involving multiplication as repeated addition and division (by 2 and 4) using concrete objects, pictorial representations and arrays with the support of the teacher.

Recognise, find and name a half as one of two equal parts of an object or shape. Recognise, find and name a half of a quantity.

Predict when a number will not share equally by 2 and reason their thinking.

Solve multiplication and division problems by repeated addition.

Explain why some shapes are difficult to halve.

Predict which quantities cannot be halved equally and explain their reasoning.

<p>Make direct comparisons between lengths/heights, (longer/shorter, taller/shorter) mass/weight (heavier, lighter), capacity/volume (full/empty, more full, less full) and time (earlier, later).</p> <p>Recognise a variety of different coins and notes.</p> <p>Use simple language to describe the chronology of events (e.g. today, yesterday, tomorrow, tonight, last night, this morning).</p> <p>Know the days of the week, months of the year.</p> <p>Use Know that a clock 'measures' time.</p> <p>Handle, talk about and know the names of the different common 2D shapes.</p> <p>Use the language of left, right, top, middle and bottom to talk about position, direction and movement.</p>	<p>Measure and begin to record lengths and heights, mass/weight, capacity/volume (non-standard measures) and time (hours, minutes, seconds).</p> <p>Compare, describe and solve practical problems across a range of measures including lengths and heights, mass/weight, capacity and volume.</p> <p><u>Solve problems about length or height by saying which is longer / taller / shorter.</u></p> <p><u>Solve problems for volume by saying whether a container is full / half full or empty or whether one container is more full than another.</u></p> <p><u>Solve problems for time by saying whether something is quicker / slower, or if something happened earlier or later.</u></p> <p>Recognise and know the value of different denominations of coins and notes.</p> <p>Sequence events in chronological order using language (e.g., before and after, next, first).</p> <p>Use language relating to dates, including days of the week, weeks (e.g. fortnight, weekend) months and years when talking about events.</p> <p><u>Tell the time to the hour and half past the hour. Draw these on a clock face.</u></p> <p>Recognise and name properties of common 2-D shapes, including rectangles (including squares), circles and triangles and cuboids (including cubes), pyramids and spheres.</p> <p>Describe position, direction and movement, including whole and half turns.</p>	<p>Explain why it is important to use the same units of measure when comparing lengths etc.</p> <p>Explain the methods used to solve practical problems across a range of methods.</p> <p>Order the denominations of coins and notes and explain their thinking.</p> <p>Make comparisons between different passages of time e.g. a week being 7 days; a school week is 5 days; 2 days in a weekend</p> <p>Sort and compare 2D shapes using different properties, explaining reasoning.</p> <p>Create and record simple sequences of movement including changes in direction and turns.</p> <p>Solve problems involving whole and half turns.</p>

Band 4 Mathematics						
B	B+	W	W+	S	S+	Deep
<p>Count up in 3s, 6s, 25s and 1000s from 0.</p> <p>Find 1000 more than any given number.</p> <p>Order a set of 4-digit numbers.</p> <p>Know how to partition 3-digit and 4-digit numbers. Read 4-digit numbers in numerals and accurately estimate larger sets of objects.</p> <p>Round to the nearest 10 using number lines.</p> <p>Know that our number system has changed over time.</p> <p>Read Roman Numerals to 10 (x).</p> <p>Effectively choose when it is more efficient to calculate mentally rather than use a written method (e.g. 1000+9 or 1020-19).</p> <p>Add and subtract 3-digit numbers using formal written methods in a range of real life contexts and single step problems.</p> <p>Use inverse operations to check their answers.</p> <p>Solve missing number addition and subtraction problems.</p> <p>Recall and use multiplication facts for the 2s, 3s, 4s, 5s, 6s and 10s in a range of real life contexts and role play.</p> <p>Use a multiplication square for remaining tables to help solve problems.</p> <p>Use commutativity to make mental multiplication</p>		<p><u>Count in 6s, 7s, 9s 25s and 1000s from 0.</u></p> <p>Find 1000 more or less than any given number mentally.</p> <p><u>Count backwards through zero to include negative numbers.</u></p> <p>Recognise the value of each digit in a 4 digit number.</p> <p><u>Compare and order a set of numbers beyond a 1000 (e.g. using number lines and &lt;&gt;).</u></p> <p>Identify, represent and estimate numbers using groupings (tallies, groups of 25, 50, 100).</p> <p>Read and write 4-digit numbers in numerals and words (including accurate spelling).</p> <p><u>Round any number to the nearest 10, 100 and 1000 (using number lines). Read Roman numerals to 100 (I to C).</u></p> <p>Know that over time, the numeral system changed to include the concept of zero and place value.</p> <p><b>Solve number and practical problems using all of the above and with increasingly larger positive numbers.</b></p> <p>Add and subtract numbers with up to 4 digits using the formal written methods of addition and subtraction where appropriate.</p> <p>Estimate and use inverse operations to check answers to a calculation. <u>Solve addition and subtraction two-step problems in contexts.</u></p> <p><u>Decide which operations and methods to use and why within problem solving.</u></p> <p><u>Recall multiplication and division facts for multiplication tables up to 12 x 12.</u></p>			<p>Generalise using knowledge of 6s, 7s, 9s and 1000s beyond (e.g. I know that 18 is a multiple of 6 therefore is must also be a multiple of 3, I know that 77 is multiple of 6 therefore 7777 will be too).</p> <p>Know why other tables can't help with 7s and 9s. Justify their method when adding and subtracting multiples of 1000s mentally (e.g. 4000).</p> <p>Justify how larger and smaller numbers can be created using the same 4 digits.</p> <p>Explain how their methods make estimating and grouping of larger sets of objects more efficient.</p> <p>Use rounding as part of problem solving.</p> <p>Argue which system is more effective - Roman numerals or the Arabic system we use today.</p> <p>Explain how their approach to a calculation depends on the context and range of numbers.</p> <p>Use formal methods of addition and subtraction accurately in a range of real life contexts. J</p> <p>ustify their approaches to multi-step addition and subtraction problems and use inverse operations across the steps to check their answers.</p> <p>Spot calculations within real life scenarios and role play (e.g. shop or bank corner).</p> <p>Explain links between known tables and other multiples (e.g. 24s, 20s, 18s, 33s etc.).</p> <p>Explain what happens when you multiply by 0 and</p>	

<p>easier.</p> <p>Use partitioning to with written multiplication including 2-digit by 1-digit numbers.</p> <p>Use multiplication and division to solve problems in a range of contexts. Spot relationships between integer ratios based on 2,3,5 and 10 (i.e. 1:2 or 3:9)</p> <p>Spot equivalence involving <math>\frac{1}{3}</math>s, <math>\frac{1}{2}</math>s, <math>\frac{1}{4}</math>s and <math>\frac{1}{10}</math>s. Count up and down in taught fractions, including hundredths.</p> <p>Know that <math>\frac{1}{100}</math> arises by dividing an object or quantity by 100.</p> <p>Add and subtract fractions with the same denominator where the answer goes beyond one whole (e.g. <math>1\frac{1}{3}</math>).</p> <p>Know the function of the decimal point and relate this to measures and money.</p> <p>Know that all fractions have a decimal equivalent.</p>	<p>Use place value, known and derived facts to multiply and divide mentally.</p> <p>Multiplying by 0 and 1; dividing by 1; multiplying together three numbers. Recognise and use factor pairs.</p> <p>Understand commutatively in mental calculations.</p> <p>Multiply two-digit and three-digit numbers by a one-digit number using formal written layout. Solve problems involving multiplying and adding.</p> <p>Use the distributive law to multiply two digit numbers by one digit.</p> <p>Solve harder correspondence problems such as n objects are connected to m objects.</p> <p><u>Recognise and show, using diagrams, families of common equivalent fractions.</u></p> <p><u>Count up and down in hundredths.</u></p> <p><u>Recognise that hundredths arise when dividing an object by one hundred and dividing tenths by ten.</u></p> <p>Use fractions to divide quantities, including non-unit fractions where the answer is a whole number.</p> <p>Add and subtract fractions with the same denominator.</p> <p>Recognise and write decimal equivalents of any number of tenths or hundredths.</p> <p>Recognise and write decimal equivalents to <math>\frac{1}{2}</math>, <math>\frac{1}{4}</math>, <math>\frac{3}{4}</math>. Find the effect of dividing a one- or two-digit number by 10 and 100.</p> <p><u>Round decimals with one decimal place to the nearest whole number.</u></p> <p>Compare numbers with the same number of decimal places up to two decimal places.</p> <p><u>Solve simple problems involving fractions and decimals</u> (e.g. time, money, measures, calculate and divide quantities).</p>	<p>divide by 1, reasoning their thinking with examples.</p> <p>Identify common factors within a set.</p> <p>Solve multi-step problems that involve mixed calculations and explain their methods.</p> <p>Reason their methods when using distributive law, explaining how this makes mental calculation easier.</p> <p>Prove hypothesis using scaling as evidence using n:m notation.</p> <p>Create problems involving hundredths.</p> <p>Explain the link between fractions and multiplication (e.g. <math>20 \times \frac{1}{4} = 5</math> is equivalent to <math>\frac{20}{4} = 5</math>).</p> <p>Explain how to calculate decimal equivalents of simple fractions.</p> <p>Reason what happens to the value of numbers as they pass the decimal point when multiplying or dividing by 10 and 100.</p> <p>Compare numbers with different decimal places and reason their thinking.</p>
--	---	---

<p>Sort measures into the correct families (e.g. cm, mm, m = length / mg, g, kg = mass / ml, cl, l = volume etc.).</p> <p>Identify the context of a measure problem e.g. a time problem or a capacity problem.</p> <p>Measure the perimeter of a simple shape using cm.</p> <p>Explain why a shape is a quadrilateral.</p> <p>Know that triangles is a family of shapes and there are different types of triangles, beyond the right angled triangle.</p> <p>Know that there are different type of angles beyond right angles and begin to use the terms acute angles, obtuse angles and right angles.</p> <p>Identify single simple lines of symmetry in shapes.</p> <p>Plot coordinate using (n, n) referencing in the first quadrant [e.g. (2,4)].</p> <p>Know what translation means; understanding that while the shape's location will change, the overall form will remain the same (e.g. 'stamping').</p> <p>Read examples of discrete data from a variety of graphs and charts showing discrete data.</p>	<p><u>Convert between different units of measure [e.g., kilometre to metre; hour to minute].</u> Estimate, compare and calculate different measures, including length, mass and money in pounds and pence in order to solve problems.</p> <p>Read, write and compare time between analogue and digital 12-hour and 24-hour clocks. Solve problems involving converting units of time such as hours to minutes, minutes to seconds, years to months or weeks to days</p> <p>Measure and calculate the perimeter of a rectilinear figure (including squares) in centimetres and metres. Find the area of rectilinear shapes by counting squares.</p> <p><u>Compare and classify geometric shapes, including different quadrilaterals and different triangles, based on their properties and sizes.</u></p> <p>Identify where angles are greater than two right angles; know the term straight angle refers to two straight angles together. <u>Identify lines of symmetry in 2-D shapes presented in different orientations.</u> Use line symmetry with two lines of symmetry.</p> <p>Describe positions on a 2-D grid as coordinates in the first quadrant. Describe movements between positions as translations of a given unit to the left/right and up/down. <u>Plot specified points and draw sides to complete a given polygon.</u></p> <p>Interpret and present discrete and continuous data using appropriate graphical methods, including bar charts and time charts. <u>Solve comparison, sum and difference problems using information presented in bar charts, pictograms, tables and other graphs.</u></p>	<p>Explain relationships between different units of measure and the calculations needed to convert between them (e.g. I need to multiply a length in m by 100 to measure it in cm). Justify and explain their approach to solving problems that involve mixed measures.</p> <p>Articulate the difference between perimeter and area using mathematical terminology. Begin to use formula to help calculate the perimeter of squares and oblongs. Justify any relationships seen between perimeter and area.</p> <p>Explain the differences between isosceles, scalene, right angled and equilateral triangles. Sort and re-sort within families of shapes using changing criterion explaining why some shapes have moved groups and other remained the same (e.g. a range of triangles or a set of quadrilaterals).</p> <p>Explain strategies for comparing and ordering angles using correct mathematical language. Create symmetrical figures based on more than one line of symmetry and explain relationships between the reflections. Explain the relationship between the number of sides in a regular polygon and its lines of symmetry.</p> <p>Complete shapes using coordinates (links to quadrilaterals and triangles), explaining their method. Explain translation using algebraic formula (e.g. <math>(x+4, y-2)</math>)</p> <p>Justify choices when using graphs, including how this is influenced by continuous or discrete data. (e.g. I wouldn't use a time graph to show the results of a poll on favourite pet)</p>

Use standard methods to simplify simple fractions dividing denominator and numerator by a common factor.

Compare pairs of fractions by converting both to the same denominator.

Add and subtract fractions with different denominators where these can be easily converted (e.g. fifths and tenths, thirds and sixths).

Find halves of unit fractions and know that 'x 1/2' is equivalent to '÷ 2'.

Identify digits in the tenths, hundredths and thousandths column.

Multiply and divide numbers by 10, 100 and 1000 where up to one decimal place will result.

Multiply numbers with up to one decimal place by whole numbers.

Use written division methods and begin to use decimal results instead of remainders.

Solve problems which require answers to be rounded. Recall equivalences between simple fractions, decimals and percentages.

Use common factors to simplify fractions; use common multiples to express fractions in the same denomination.

Compare and order fractions, including fractions > 1.

Add and subtract fractions with different denominators and mixed numbers, using the concept of equivalent fractions.

Multiply simple pairs of proper fractions, writing the answer in its simplest form [for example,  $\frac{1}{4} \times \frac{1}{2} = \frac{1}{8}$ ].

Divide proper fractions by whole numbers [for example,  $\frac{1}{3} \div 2 = \frac{1}{6}$ ].

Associate a fraction with division and calculate decimal fraction equivalents [for example, 0.375] for a simple fraction [for example,  $\frac{3}{8}$ ].

Identify the value of each digit in numbers given to three decimal places.

Multiply and divide numbers by 10, 100 and 1000 giving answers up to three decimal places.

Multiply numbers with up to two decimal places by whole numbers.

Use written division methods in cases where the answer has up to two decimal places.

Solve problems which require answers to be rounded to specified degrees of accuracy.

Recall and use equivalences between simple fractions, decimals and percentages, including in different contexts.

Solve problems involving the relative sizes of two quantities where missing values can be found by using integer multiplication and division

solve problems involving the calculation of percentages [for example, of measures, and such as 15% of 360] and the use of percentages for comparison

solve problems involving similar shapes where the scale factor is known or can be found

Solve problems involving unequal sharing and grouping using knowledge of fractions and multiples.

Have a strong sense of number and use this to recognise when answers are obviously incorrect.

Explain why a given degree of accuracy is appropriate.

Fluently express fractions, including those >1, in a range of equivalent forms and use these representations to evaluate differences.

Use knowledge of addition and subtraction of fractions to solve problems and explore fractional number patterns.

Multiply and divide pairs of fractions cancelling down answers to their simplest forms.

Use fractions to maintain accuracy when use of a decimal would result in recurring places (e.g. thirds, sevenths or ninths).

Explore patterns with recurring decimals (e.g. sevenths).

Move fluently between different representations of fractional parts, decimals, fractions and percentages and justify which is appropriate to use in a range of contexts.

Convert between metric units of measure up to 2 decimal places.

Explain relationships between metric measures and how these are used to convert (e.g. I need to multiply m by 100 to convert into cms).

Convert between metric and imperial measures using conversion charts.

Sort metric measures into families based on function (e.g.  $\text{cm}^3$ ,  $\text{m}^3$ ,  $\text{km}^3$  = volume, ml, cl, l= capacity).

Select the correct measurement for the task in hand (e.g. mm for small perimeter or litres for larger capacity).

Use formula to calculate the area of squares and oblongs.

Draw 2-D shapes using given side dimensions. Know that a net is the 2-D pattern that creates a 3-D figure.

Use the properties of rectangles to deduce related facts and find missing lengths and angles.

Know there is  $360^\circ$  in a circle and the edge is called the circumference.

Know there are  $180^\circ$  in a straight line and  $360^\circ$  in a full turn and use this to identify missing angles.

Confidently plot coordinates and translate shapes in the first quadrant.

Know that the x and y axis can be positive or negative.

Solve problems involving the calculation and conversion of units of measure, using decimal notation up to three decimal places where appropriate.

Use, read, write and convert between standard units.

Convert between measurement of length, mass, volume and time from a smaller unit to a larger unit and vice versa.

Do this using decimal notation up to 3dp.

Convert between metric and imperial measures using formula (e.g. miles and kilometres)

Calculate, estimate and compare volume of cubes and cuboids using standard units, including cubic centimetres ( $\text{cm}^3$ ) and cubic metres ( $\text{m}^3$ ), and extending to other units [e.g.,  $\text{mm}^3$  and  $\text{km}^3$ ].

Recognise that shapes with the same areas can have different perimeters and vice versa.

Recognise when it is possible to use formulae for area and volume of shapes.

Calculate the area of triangles (doubling into rectangles then halving) and parallelograms (breaking into rectangles and triangles).

Draw 2-D shapes using given dimensions and angles.

Recognise, describe and build simple 3-D shapes, including making nets.

Compare and classify geometric shapes based on their properties and sizes and find unknown angles in any triangles, quadrilaterals, and regular polygons.

Construct conversion charts using their understanding of two different units of measure (e.g., miles and kilometres) and explain direct relationships using ratios.

Create their own multi-step problems based on conversion graphs.

Test conjecture involving volume (e.g. This cube has a volume of  $729 \text{ cm}^3$  sides.

I think I could fit 3 cubes which has side of 3cm inside my bigger cube. Am I right?)

Justify why the formulae for area or volume of certain shapes always work, regardless of size.

Begin to use formula to calculate the area of triangles and parallelograms.

Link 3-D shapes with their net and explain why a given net would not properly form the desired shape.

Classify geometric shapes on multiple criterion and justify their thinking using precise mathematical language.

Articulate the relationship between radius, diameter and circumference.

Generalise about parts of a circle (e.g. if the circle is three times as big, the diameter and circumference must also be three times as big, but the radius will be 6 times as big).

Prove why vertically opposite angles are always equal.

<p>Read coordinates in all four quadrants.</p> <p>Interpret and construct tables, bar charts and line graphs and use these to solve problems.</p> <p>Read pie charts.</p> <p>Know what mean is one type of average.</p>	<p>Illustrate and name parts of circles, including radius, diameter and circumference and know that the diameter is twice the radius.</p> <p>Recognise angles where they meet at a point, are on a straight line, or are vertically opposite, and find missing angles.</p> <p>Describe positions on the full coordinate grid (all four quadrants).</p> <p><u>Draw and translate simple shapes on the coordinate plane, and reflect them in the axes.</u></p> <p><u>Solve problems that involve unequal sharing or grouping.</u></p> <p><u>Use knowledge of fractions and multiples to do this.</u></p> <p>Interpret and construct pie charts and line graphs and use these to solve problems. Calculate and interpret the mean as an average.</p>	<p>Predict the location of shape after a series of translations or reflections in all four quadrants, visualising the sequence in their heads.</p> <p>Solve multi-step problems that draw across more than one information source, including pie charts.</p> <p>Prove or disprove conjecture using a range of information sources.</p>
