

In science, all children will be excited to learn, allowing their knowledge to deepen through their own curiosity and well-structured and resourced lessons. All children will learn about the relevance to science in their lives and receive equal opportunities to develop a love for science, using different forms of learning to reach this.

Children understand the relevance to their own lives in order to show the importance of what they are learning

Lessons excite, enthuse and interest children making them want to take ownership of their learning, deepening their understanding

Lessons are well planned, resourced and presented in an enthusiastic manner.

All children are able to access the learning.

It is seen throughout the school, making links with cross-curricular activities.

Science teaching is good at our school when....

- Pupil Voice
- Teacher questionnaire
- School development plan
- Book look
- Learning walk
- Self - evaluation
- Curriculum
- Research and CPD
