

2.2 STARRY TOTALS

YEAR

1

Objective: Solve addition problems.

Instructions

1. Take a few toys or objects in each hand.
2. Put each item from one hand down on the floor ahead of you, one at a time, jumping to each one and counting as you go (e.g. 5 items).
3. Continue counting on and jumping to each object in your other hand (e.g. 7 items).
4. Write down what you did, for example, 5 (right hand) + 7 (left hand) = 12.

Challenge

Ask someone for two numbers under 10. Add them together and complete that many star jumps!
