

SCITECH SHOWCASE

On the 23rd January, aspiring scientists from Y5 visited the annual Scitech showcase which took place at Plymouth University.

The event was supported by the Children's University.

I am interesting in studying engineering at University.

We had fun with bubbles and used them to look at the structure of 3D shape.

We explored how technology can control a variety of different objects.

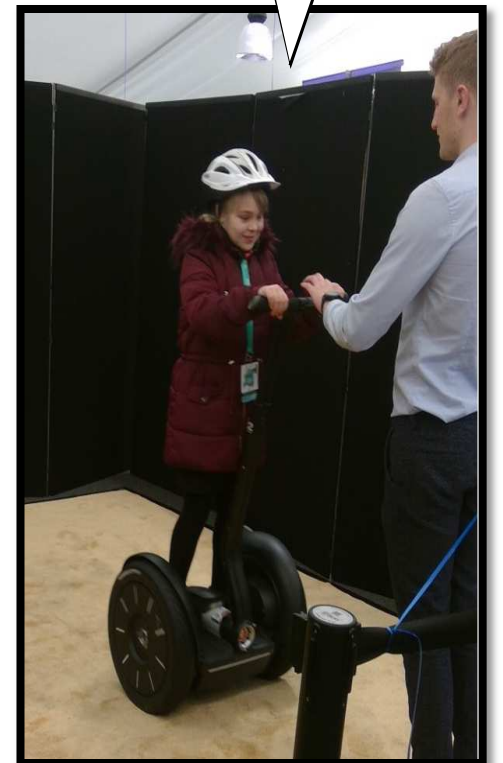

We used microscopes and identification tools to find out how many different types of fern grows in Britain.

This visit has changed my mind about going to University.

I loved going on the Segway. I would like to go to University to become a vet.

I liked looking at the leaves in the magnifying glass.

There was a chance to explore maths and probability through some games.
