

DARTMOOR ZOO

Dartmoor zoo was an exhilarating trip where we could learn about different animals, their habitats and how they live. We took notes of the talks about the meerkats, otters and a Hayley the bear. It was very absorbing so we are going to share some of them with you.

This is Hayley

We learnt that she can be very inquisitive! She enjoys observing visitors as they walk on by. She relishes eating vegetables and has honey as an occasional luxury. She used to have a companion named Fudge but he unfortunately passed away.

Here are the Otters!

They search for food within the water and on land. They also have 2 "coats". One is to keep them warm as the other one stops them from getting wet. They are really adorable and were incredible to observe.

Here are the wolves.

We didn't get a talk on them, but once we came they were snoozing away. It was quite scary and intriguing at the same time.
