## Progression in Calculations. Y3

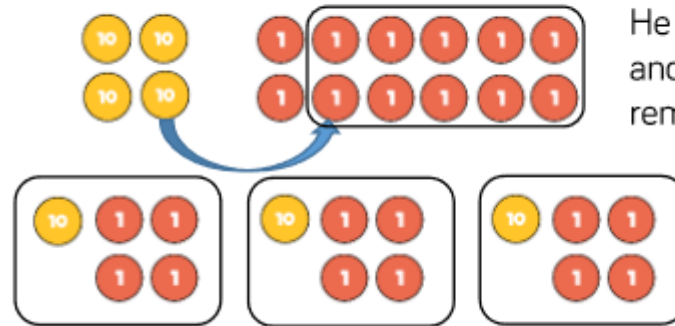

### Division.

#### Divide 2-digits by 1-digit (2)

Children divide 2-digit numbers by a 1-digit number by partitioning into tens and ones and sharing into equal groups. They divide numbers that involve exchanging between the tens and ones. The answers do not have remainders.

Children use their times-tables to partition the number into multiples of the divisor.

Ron uses place value counters to divide 42 into three equal groups.

Then he shares the ones.  
 $42 \div 3 = 14$

Annie uses a similar method to divide 42 by 3

Tens	Ones
10	1 1 1 1
10	1 1 1 1
10	1 1 1 1

Use Annie's method to calculate:

## Progression in Calculations. Y3

### Division.

#### Divide 2-digits by 1-digit (3)

Children move onto solving division problems with a remainder. Links are made between division and repeated subtraction, which builds on learning in Year 2.

Tommy uses repeated subtraction to solve  $31 \div 4$

$$31 \div 4 = 7 \text{ r } 3$$

Use place value counters to work out  $94 \div 4$

Did you need to exchange any tens for ones?

Is there a remainder?

Tens	Ones
