

Moor Nook Community Primary School

Pets in School Policy

July 2019

Moor Nook Primary School recognises that the presence of animals in our school can provide a valuable learning experience but animals cannot be allowed to endanger student safety or disrupt learning. The wellbeing and care of the animal should also be in line to ensure the best possible conditions for the animal.

Introduction

This summary details the basic health and safety issues associated with handling and keeping animals in schools.

Handling animals

If animals will be handled, the most important issue is the maintenance of good hygiene. When handling animals:

- do not consume food or drink,
- cover any open cuts or abrasions on the exposed skin of hands and arms with waterproof adhesive dressings,
- wash your hands with soap and water before and directly after handling animals.
- keep animals away from the face.

Careful handling of small mammals and other animals is most important; the animals should be restrained sufficiently so that, they cannot damage themselves or the handler.

Mammals should be handled daily if possible (unless breeding or nursing when they should be disturbed as little as possible). In this way they will normally become quite tame and accustomed to being handled.

Gloves should not normally be worn unless it is known that an animal for one reason or another is likely to bite or scratch. In this situation a pair of rubber gloves which does not particularly reduce dexterity, is a sensible precaution.

Physical injuries

There is always the danger of bites and scratches, and teachers or technicians should check that any animals kept / brought in are docile, friendly and gentle in the presence of children.

Small fingers poked towards the mouths of normally non-aggressive animals may be interpreted as an offering of food and obligingly bitten.

Diseases, parasites and allergies

The likelihood of diseases being passed on from pet animals is low. However allergic reactions to mammals, birds and a few other animals cannot be discounted. These might result from handling the animals or just from being near them and be detected by the development of skin rashes, irritation to the eyes and nose or breathing difficulties. Hand washing soon after handling animals or after close contact with animals will help.

Teachers should watch for the development of allergic reactions in pupils who come into contact with the animals. Children known to have allergic reactions to specific animals must, of course, have restricted access to those that may trigger a response. In most cases, an allergic reaction will subside once the animal and the affected person are kept apart; in extreme cases, seek medical advice.

Bringing pets into schools

In addition to the general guidance given above it is important that suitable arrangements are made in advance for the well being of animals for the short time they are to be on the premises. When a variety of animals will be together, consider carefully the possibility of unwanted interactions. Animals must be housed properly and separately whilst on the premises, any containers used to transport them must be appropriate and retain the animal securely.

Animal health

Animals will be taken to the vets for the correct vaccinations.

If animals are not kept in clean conditions, or come into contact with other animals from dubious sources, it will no longer be possible to guarantee that the animals will remain in a disease-free condition.

Holiday times, particularly in primary schools, can obviously create real difficulties. If animals are taken out of school at holidays, they should not be sent home with pupils or other people unless all of the following considerations can be satisfied.

- It can be guaranteed that the animals will be looked after as well as usual.
- Whoever is caring for the animals must have all the necessary information, equipment, food, skills, etc.
- Parents must give their consent and collect the animals with the child.
- Steps will be taken to ensure that the school's animals will not be able to come into contact with pet animals (cats, dogs, rodents or other mammals).
- That small mammals cannot come into contact with wild rodents (mice, rats, etc) while off the school premises.

Cleaning and hygiene

This is clearly important, both for the health of the animals and for those people looking after them. Hands should be washed *before* and, of course, after cleaning cages, tanks etc. rubber or plastic gloves should preferably be worn.

After removing soiled litter material, cages should be scrubbed with hot water and liquid detergent. Food will be stored in a sealed container.

Frequency of cleaning

As a general rule, this should be done at least every 7 days. These animals should be cleaned at least once a week. Arrangements must be made for cages to be cleaned as regularly as normal at holiday times. Soiled litter will be sealed in strong plastic bags and placed with other waste in dustbins.
