

Computing at Pondhu School

Computing has replaced ICT in the 2014 National Curriculum. Computing is a subject that will prepare children to work effectively in the new digital world by enabling them to use technology effectively for a range of purposes. There are three main aspects of the computing curriculum; Computer Science, Digital Literacy and Information Technology. E-safety is a key component of the Digital Literacy aspect of the computing curriculum in which children learn how to stay safe online.

As the subject leader for computing, I will be monitoring the coverage of the computing curriculum across the school in partnership with the Link Governor Martin Mayo.

In the Subject Development Plan for this academic year, the main objectives are to provide ensure regular monitoring of children's progress, monitor the teaching and learning of computing throughout the school and to ensure that the children have access to the tools they need to make good progress. At Pondhu Primary School, we aim for children to be able to talk confidently and enthusiastically about their learning experiences in computing.

Subject Leader: Kylie Bunt

Link Governor: Martin Mayo
