

### Jenn's Den

A big thank you to our Site Manager Paul Dean - whose artistic talent and practical skills have enriched our playground so much - for his latest project: He has transformed the stairwell overhang to the right of the front door into a fabulous, cosy, grass-lined den for the children to play in. Thank you to Mr McIntyre for helping Paul to stick the grass to the ceiling. Sorry you got covered in glue!

We've called it 'Jenn's Den' in tribute to Jenn Salmon, the Shine leader, who passed away recently. The den is a lovely, positive way to help the children remember Jenn, particularly those she worked closely with in Shine's Breakfast and After School Clubs.

We're very proud to announce that Ava Hilton, from our KS2 Film Club, is runner up in the latest round of Into Film's Review of the Week competition for her fantastic review of 'Hidden Figures'.

Huge congratulations to Ava! Her review will be spotlighted on the Into Film website and she'll be getting a prize in the post soon.

Here is her review...

#### 'Females in Science'

*Hidden Figures is a film about women overcoming American racial segregation and sexism stereotypes in science (NASA). It features Tarajip Henson as Katherine Johnson, who acts as a human computer in NASA's workplace and Octavia Spencer as Dorothy Vaughan, who monitors the African-American women in the computer department. There was also Janelle Monae as Mary Jackson - the first woman involved in building the structure of the Apollo space shuttle.*

*I really enjoyed this film as it was a really strong feminist film, that really empowered me to take up science as a hobby. The transitions between scenes really brought it all together. The acting was AMAZING, and I liked the change of tempo between different scenes.*

*Over all, I would really recommend this movie to 10+.*
