## Organise your APPs into folders

Press down on one of your apps until it starts to wobble. Drag it onto a similar app e.g. maths apps and it will create a folder. Your folder will already be named, but you can change it easily.

## Taking a screen shot

If you press your on button and your reset button at the same time, it will take a screen shot of whatever is showing on your iPad.

## Moving to a specific part of your text

If you want to jump to a certain part of your text, like the middle of a word, press down on the word and a magnifying glass will appear. This will then move the cursor where you need it.
