

Year 2

Topic 1 - Monday 20<sup>th</sup> July - Science

To finish off our year as Koalas and Bumblebees we would like you to create posters to encourage people to save these endangered animals.

Think about why your class animal is endangered (some handy hints are below) and tell people what they need to do to help save them.

Bumblebees - these insects have become endangered due to climate change, habitat loss, and disease. Bumblebees need to live near lots of flowers so they can get their food.

Koalas - these marsupials have become endangered due to habitat destruction, bush fires and road accidents. They like to live in areas where their favourite trees are, usually Eucalyptus.
