

3 Aki has some pairs of numbers.

3 tens + 4 tenths + 2 hundredths or

T	O	•	Tth	Hth
3	1	•	1	2

 or

3.24

- Which is the greatest number in each pair?
- Which is the greatest number overall?

I am going to put each number on a place value grid and start by looking at the 10s.

I will try writing each number out as a decimal first. Then I will compare them by looking at the place value columns from the left.
