

Drawing Geometric Patterns

I can create my own early Islamic style geometric pattern.

Connect the intersecting lines on the 5 circle grid to practise drawing your own motifs. When you are happy with the motifs you can combine them to create a larger design and colour it in.

Look at these examples to help you get started.

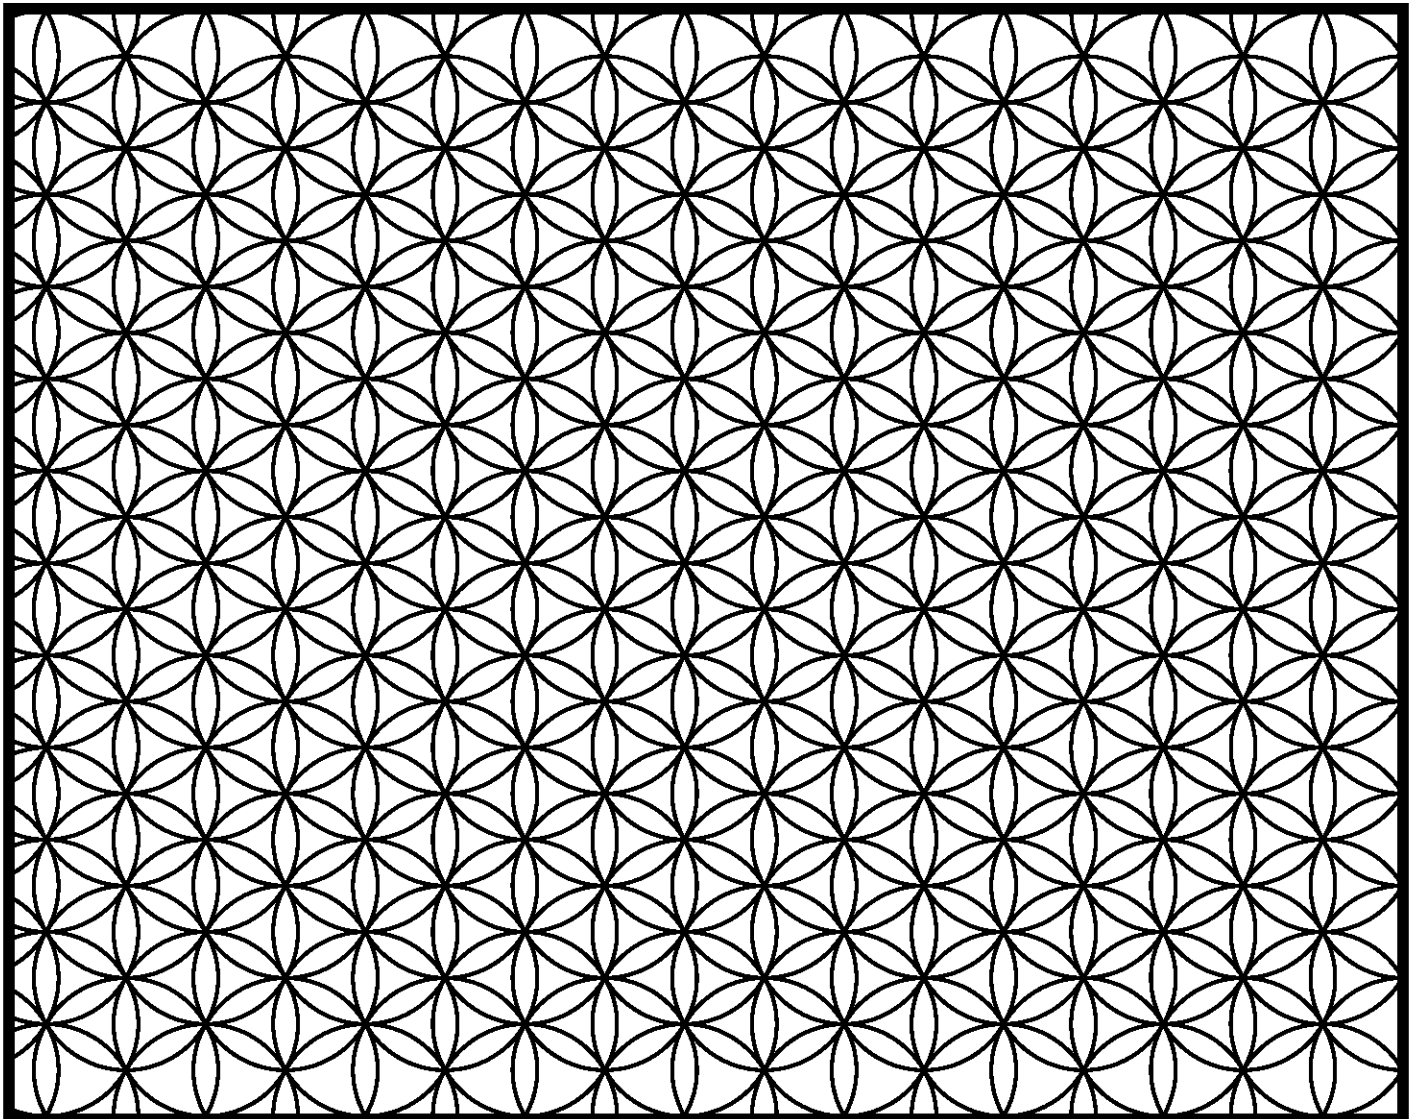

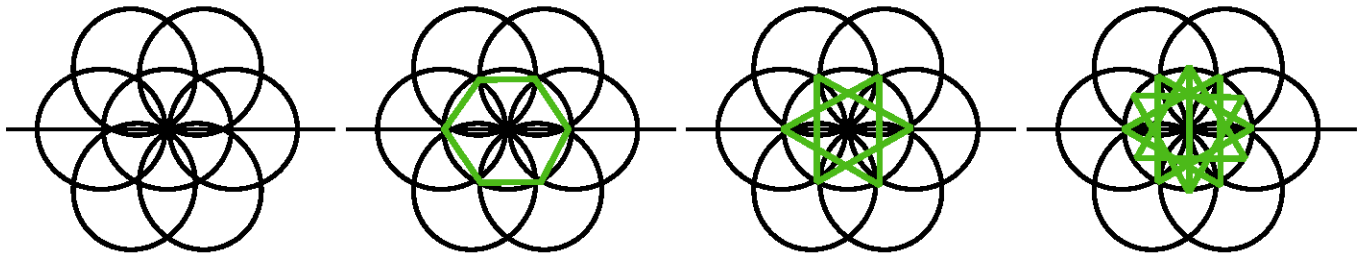

Drawing Geometric Patterns

I can create my own early Islamic style geometric pattern.

Connect the intersecting lines on the 7 circle grid to practise drawing your own motifs. When you are happy with the motifs you can combine them to create a larger design and colour it in.

Look at these examples to help you get started.

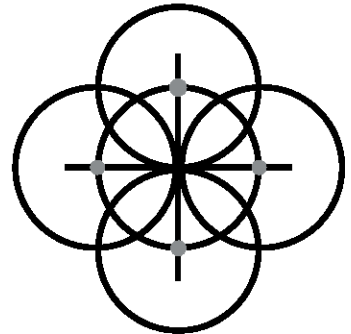

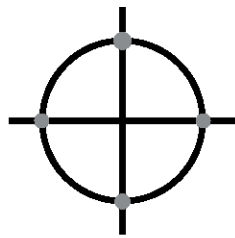

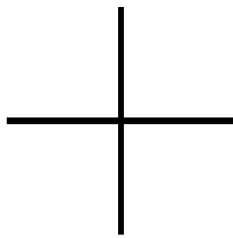

Drawing Geometric Patterns

I can create my own early Islamic style geometric pattern.

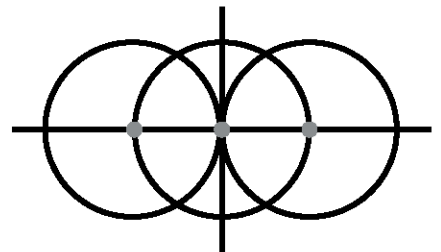

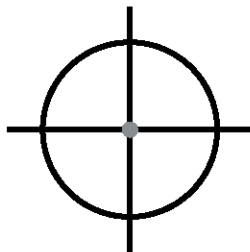

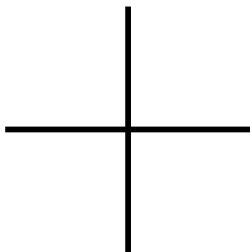

Decide whether you want to create your design using 5 or 7 overlapping circles, then follow the instructions below:

Drawing 5 Overlapping Circles

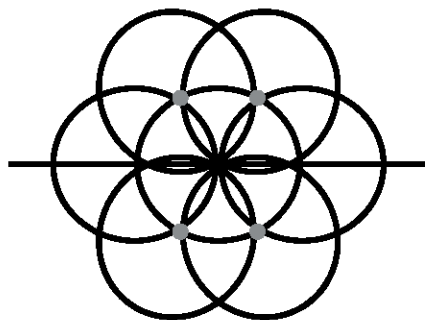

1. Use a ruler to draw two straight, perpendicular lines.
2. Put the point of a compass where the lines meet to draw a circle.
3. Put the point of the compass where each line meets the circle to draw 4 more circles.

Drawing 7 Overlapping Circles

1. Use a ruler to draw two straight, perpendicular lines.
2. Use a compass to draw a circle.
3. Put the point of the compass where the lines meet to draw 2 more circles either side of the first.

4. Draw 4 more identical circles, placing the compass point where the circles meet.
