Figure S1. The HPLC results of (A) egg white hydrolysate from simulated in vitro gastrointestinal digestion (5 mg/mL), and samples from (B) the AP side and (C) the BL side of Caco-2 cell monolayers after 2 h incubation time.
Figure S2. The HPLC results of (A) egg white hydrolysate from simulated in vitro gastrointestinal digestion (10 mg/mL), and samples from (B) the mucous side and (C) the serous side of everted rat sacs after 2 h incubation time.
