Table of Contents

Figure S1. Western blots with corresponding Ponceau-stained gels.
Figure S2. Western blots of the downstream targets of CREB.

Table S1: All significantly (q ≤ 0.05) deregulated (fold-change ± 1.3) proteins for all measurements (4 months, 12 months, 18 months and 24 months)
Table S2: All identified proteins at 24 months
Table S3: All quantified proteins with an identification based on at least two UP for the low-dose (0.063 Gy) group
Table S4: All quantified proteins with an identification based on at least two UP for the medium-dose (0.125 Gy) group
Table S5: All quantified proteins with an identification based on at least two UP for the high-dose (0.5 Gy) group
Table S6: All deregulated proteins in the low-dose (0.063 Gy) group
Table S7: All deregulated proteins in the medium-dose (0.125 Gy) group
Table S8: All deregulated proteins in the high-dose (0.5 Gy) group
Table S9: Raw data of the carbonylation and BCA assay
Figure S1. Western blots (A) with corresponding Ponceau-stained gels (B).
Figure S2. Western blots of the downstream targets of CREB. The following proteins are shown: cFOS (A), ARC (B), PSD-95 (C). Error bars represent the SEM, n = 4, *p < 0.05, **p < 0.01, ***p < 0.001 (Students t-test).
