

Electronic Supporting Information (ESI)

Tunable Decoupling of Dual Drug Release of Oppositely Charged, Stimuli-responsive Anisotropic Nanoparticles

Eun Young Hwang, Min Jung Kang, Aamna Basheer and Dong Woo Lim*

Department of Bionano Engineering and Department of Bionanotechnology, Hanyang
University, Ansan, Republic of Korea

*Department of Bionano Engineering and Department of Bionanotechnology, Hanyang
University, Ansan, Republic of Korea; Email: dlim@hanyang.ac.kr

Key words: Tunable Decoupling, Dual Drug Release, Opposite Charges, Anisotropic
Nanoparticles, Stimuli Responsiveness

The supporting information contains Figure S1 to show *in vitro* cellular uptake of the ANPs into the cells. Figure S1 represents microscopic images of HeLa cells when incubated with the ANPs after 6 hours at the ANP concentration of 0.01 to 1.0 mg/mL.

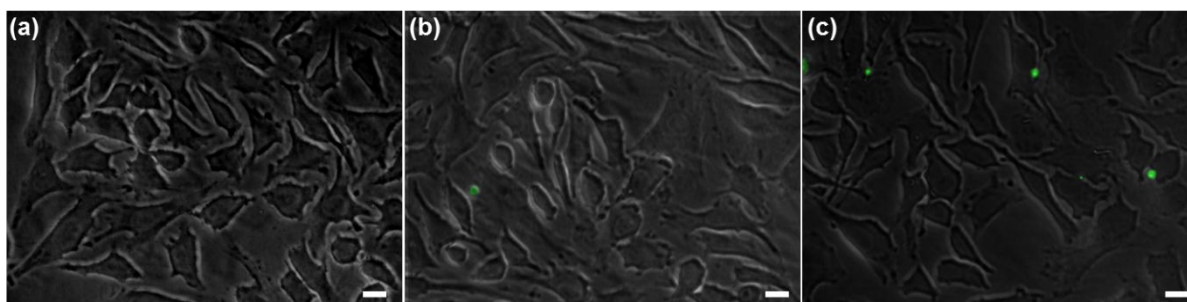

Figure S1. Microscopic images of HeLa cells incubated with the ANPs after 6 hours at the ANP concentration of (a) 0.01 mg/mL, (b) 0.1 mg/mL and (c) 1.0 mg/mL. The bright-field images of the cells and fluorescent images of the ANPs were merged. The scale bar is 20 μm .
